Hiring Manager
Magna Electronics Romania SRL
STR. PALAS NR. 5C, IAȘI, JUD. IAȘI

+ **Dear Hiring Manager,**

Driven by a commitment to building reliable and scalable software, I am excited to apply for the Software Development Engineer role at Magna Electronics Romania in Iasi. My career has been defined by hands-on development, problem-solving in complex environments, and fostering collaboration across teams to ensure timely delivery of high-quality solutions.

In my previous roles, I have consistently taken ownership of challenging projects, breaking down complex requirements into actionable development tasks that enabled teams to meet milestones with precision. I have resolved critical production issues under tight deadlines, reducing downtime and improving system stability. By conducting thorough code reviews, I ensured maintainability and adherence to engineering standards, while providing constructive feedback that elevated team performance. I have also mentored junior engineers, helping them sharpen their skills and increase productivity. Beyond execution, I introduced new tools and streamlined processes that improved efficiency, cutting build times and enhancing deployment reliability.

Magna's reputation for innovation in advanced technologies and its focus on sustainable, future-ready solutions make this role particularly compelling. I am especially drawn to the company's emphasis on bridging engineering excellence with real-world impact. The opportunity to act as a bridge between development teams and stakeholders—ensuring solutions are both technically sound and strategically aligned—resonates strongly with my professional values.

I would welcome the chance to discuss how my experience in guiding team members, troubleshooting complex issues, and driving efficiency can support Magna's ambitious goals. Let's schedule a conversation to explore how I can contribute to your success.

Sincerely,
Robert Buzabrici-Filipescu
