Summary

Applied Digital positions itself to capitalize on surging AI infrastructure demand, with hyperscalers projected to spend over \$400 billion annually. APLD has secured 600 MW of leased capacity across North Dakota campuses representing over \$16 billion in prospective revenue through long-term hyperscaler agreements. Advanced cooling technology and 12-14 month build timelines provide competitive differentiation. However, CoreWeave concentration at Polaris Forge 1 creates counterparty risk, while 700 MW under simultaneous construction elevates execution challenges. Low-margin fit-out revenue dominates near-term results until buildings transition to rental operations. Capital intensity strains cash flow while fierce competition from Equinix and Riot Platforms intensifies. The planned ChronoScale spinout adds complexity during critical scaling phases.

Overview

Applied Digital Corporation is a U.S. designer, developer, and operator of high-performance data centers for artificial intelligence and blockchain workloads. The company is headquartered in Dallas, TX, and was founded in 2021. It operates through two reportable segments: the Data Center Hosting Business, which provides energized colocation for crypto mining customers, and the High-Performance Compute (HPC) Hosting Business, which designs, builds, and operates AI-focused facilities. As of fiscal 2025, the Cloud Services Business was classified as held for sale and presented as discontinued operations.

In fiscal 2025, Applied Digital generated \$142.3 million in revenue from continuing operations, an increase of 17% from fiscal 2024. The Data Center Hosting Business accounted for 100% of continuing operations revenue in fiscal 2025; the HPC Hosting Business recorded no revenue during the year as it was in development. The Data Center Hosting footprint consists of two fully contracted facilities operating at approximately 286 MW of capacity: 106 MW in Jamestown, ND, and 180 MW in Ellendale, ND. Customer-owned hardware is installed in company facilities, and revenues are recognized primarily from fixed-rate hosting agreements and ancillary services.

The HPC Hosting Business is centered on the Polaris Forge campuses in North Dakota. The first 100 MW building is targeted to come online toward the end of calendar 2025, with a 150 MW building scheduled for mid-2026 and a third 150 MW building planned for 2027. The company recognized initial tenant fit-out revenue associated with the first 100 MW as construction advanced.

Polaris Forge 2 (near Harwood, ND) broke ground subsequent to fiscal 2025. The initial 300 MW IT load campus is designed for future expansion, with initial capacity expected to begin coming online in 2026 and full 300 MW capacity expected in 2027. Management is in advanced lease discussions with an investment-grade hyperscaler for the initial capacity at Polaris Forge 2.

Applied Digital faces significant competition from the likes of several prominent data center providers in the United States, including Digital Realty, Equinix, NTT, and others. In the Data Center Hosting business, APLD competes against Bitdeer Technologies Group and Riot Platforms.

Reasons To Buy:

- ▲ Applied Digital's long-term prospects ride on accelerating spending on AI infrastructure by hyperscalers. The global AI market is expected to hit \$500 billion by 2027, driven by rapid adoption across various industries, including healthcare, finance, transportation, and manufacturing. AI needs data centers with high power density, as well as changing power and cooling requirements. Hyperscalers require high-capacity data centers to meet the escalating power needs of AI and GPU-driven applications. These factors bode well for Applied Digital's future prospects. Strong spending by hyperscalers, which the company expects to exceed \$400 billion annually, bodes well for the company's prospects.
- ▲ APLD's HPC pivot is anchored by multi-year leases across its North Dakota campuses. Polaris Forge 1, with 400 MW fully leased to CoreWeave, reached ready-for-service in the second quarter of fiscal 2026 as the first 100 MW building (ELN-02) was fully energized. Management cites approximately \$11 billion of anticipated contracted lease revenue over roughly 15 years. The first 100 MW building began recognizing lease revenue in the second quarter, generating \$12 million in revenue (approximately \$8 million in cash) during the quarter. The remaining capacity, including the second 150 MW building (ELN-03), is expected to come online in mid-2026, and the third 150 MW building is scheduled for 2027. This progression transitions revenue from one-time fit-out work toward recurring rent, improving visibility and laying a foundation for a more durable earnings profile. APLD secured a lease agreement with a U.S.-based investment-grade hyperscaler at its Polaris Forge 2 campus for 200 MW, representing roughly \$5 billion in total contracted revenue over an estimated 15-year lease term. Together, these agreements represent 600 MW of leased capacity and approximately \$16 billion in prospective lease revenue before renewals.
- ▲ APLD has built repeatable asset-level financing structures intended to limit corporate dilution and support multi-campus development. In the second quarter of fiscal 2026, the company drew an additional \$562.5 million from the \$5 billion preferred equity facility with Macquarie Asset Management, bringing total draws to \$900 million to date, with up to \$4.1 billion of remaining preferred equity capital available for future projects. Applied Digital completed a \$2.35 billion private offering of 9.25% senior secured notes due 2030, issued at 97% of par, with proceeds allocated to construction of the first two buildings at Polaris Forge 1 (ELN-02 and ELN-03), repayment of existing debt, and establishment of required debt service reserves. Additionally, the company entered into a development loan facility with Macquarie Equipment Capital, including an initial \$100 million facility to fund pre-lease sourcing, planning, and early construction activities for new campuses. Management expects the second building at Polaris Forge 1 to come online in mid-2026 and reach full capacity in 2027, with the third building following thereafter. These financing agreements allow Applied Digital to retain over 85% common equity ownership of each site while significantly reducing reliance on public capital markets.
- ▲ The company targets 12-14 month build timelines, shortened from approximately 24 months previously, and is scaling to develop multiple campuses in parallel, with 700 MW under construction. Design features include direct-to-chip liquid cooling with a design PUE target of 1.18 and near-zero water use, leveraging over 200 days of natural cooling in the Dakotas. The company has expanded the footprint and flexibility of its building designs to support different GPU and ASIC chip architectures and networking infrastructure for multipurpose AI use cases and traditional cloud workloads. To strengthen its technology leadership, APLD invested \$15 million in, and led, a \$25 million funding round for Corintis, a developer of advanced direct-to-chip liquid-cooling technology featuring specially designed cold plates that map individual chip heat points and can efficiently cool chips with significantly higher power densities. These capabilities, evidenced by on-time, on-budget delivery of the first 100 MW building and full campus leasing, differentiate APLD as data center power constraints tighten and hyperscaler demand accelerates.
- ▲ While the strategic focus is HPC, the Data Center Hosting business remains fully contracted at approximately 286 MW across two North Dakota sites and is operated at full capacity as of November 30, 2025. The segment delivered exceptionally strong performance in the second quarter of fiscal 2026, generating revenue of \$41.6 million, up 15% year-over-year, and approximately \$16 million in segment operating profit. This growth was primarily driven by increased capacity online and improved operational efficiency. Management has indicated robust demand conditions alongside strong bitcoin prices. The legacy hosting base offers operational continuity and substantial cash generation that complements the staged conversion toward long-duration, hyperscaler-backed data center rental economics.
- ▲ Applied Digital is pursuing aggressive expansion plans with advanced discussions underway with another investment-grade hyperscaler across three additional sites totaling 900 MW. The company is working with utilities and strategic partners, including Babcock & Wilcox Enterprises, to explore ways to add power to the grid. The BW solution uses steam turbine technology powered by natural gas, providing a significantly shorter delivery timeline than traditional natural gas turbines, which currently have lead times extending to 2031-2032. Management expects to surpass its long-term goal of \$1 billion in net operating income within five years and aims to expand capacity to 5 gigawatts by 2030-2032.

Secured long-term leases and financing underpin AI campus buildout, leveraging speed, efficiency, and demand to transition toward durable cash flows.

Reasons To Sell:

- ▼ In the second quarter of fiscal 2026, APLD reported total revenue of \$126.6 million, up 250% year-over-year from \$36.2 million, but was driven primarily by \$73 million of low-margin tenant fit-out services and only \$12 million of rental revenue as the first CoreWeave building began operations mid-quarter. Cost of revenues surged 344% to \$100.6 million from \$22.7 million in the prior year, with approximately \$69.5 million attributable to fit-out activity. Selling, general & administrative expenses jumped to \$57 million from \$26 million, driven by \$23.8 million in accelerated vesting of employee stock awards, \$4.7 million in increased professional services (primarily legal), and \$1.2 million in additional personnel costs. Adjusted EBITDA improved to \$20.2 million compared to \$6.1 million in the prior year quarter, but the company reported a net loss attributable to common stockholders of \$31.2 million, or \$0.11 per share, down 76% from the prior year's \$130 million loss. On an adjusted basis, adjusted net income was positive \$100,000, or \$0 per share. As subsequent buildings ramp and lease revenue scales, margins should improve, but until the second and third buildings at Polaris Forge 1 (mid-2026 and 2027) and the initial Polaris Forge 2 capacity come online, the revenue mix remains unfavorable for profitability.
- ▼ CoreWeave remains the sole tenant across the fully leased 400 MW at Polaris Forge 1, creating concentration risk in the company's largest growth vector. In the legacy hosting segment, the company serves one crypto mining customer, heightening dependency in that line of business as well. While management has inked a deal with a hyperscaler for Polaris Forge 2 and is in advanced discussions with another investment-grade hyperscaler for three additional sites totaling 900 MW, no revenues from Polaris Forge 2 are expected in the near term. With multi-year revenue visibility largely tied to a single hyperscale tenant for HPC and to one customer in crypto hosting, the company's cash flow ramp and capital formation are more exposed to counterparty performance and negotiation timing. Until additional hyperscaler relationships are formalized and revenue begins flowing from multiple sources, these concentration risks remain major headwinds investors should be aware of in Applied Digital's prospects.
- ▼ The company is simultaneously constructing 700 MW across multiple campuses, requiring substantial upfront capital and execution precision across parallel projects. Management's goal to refinance the \$2.35 billion of 9.25% senior secured notes at lower rates once buildings are operational assumes favorable credit market conditions and successful transition from construction to steady-state operations. Any schedule shifts to the mid-2026 start for the second Polaris Forge 1 building, or to the 2027 completion of the third building and initial Polaris Forge 2 capacity, could delay the transition from low-margin fit-out to rent, constraining near-term financial progress. The company's advanced discussions for three additional 900 MW sites remain subject to lease execution, and while management expressed high confidence, nothing is finalized until contracts are signed.
- ▼ Applied Digital ended the second fiscal quarter with approximately \$2.3 billion in cash, cash equivalents, and restricted cash versus \$2.6 billion in total debt, most of which does not mature until 2030, and \$2.1 billion in total equity. Subsequent to quarter end, the company drew an additional \$382.5 million in financing. Although the financing platform aims to match funding at the asset level and retain over 85% common equity ownership, the massive scale of construction—700 MW currently under way with plans for 900 MW more—creates elevated execution risk. Operating cash flow was negative during the second quarter as campus construction accelerated, and capital expenditures were substantial. This capital intensity increases sensitivity to credit market conditions, construction delays, or project-level setbacks during the multi-quarter ramp.
- ▼ Applied Digital is facing stiff competition from various data center providers in the United States. Competitors like Riot Platforms and Equinix are taking initiatives to strengthen their footprints in the AI infrastructure market. Riot Platforms is scaling beyond crypto mining with new HPC facilities exceeding 1 gigawatt of planned capacity to support AI workloads. Equinix, meanwhile, operates over 260 global data centers, leveraging its xScale portfolio to serve hyperscalers seeking power-dense infrastructure. As investments in AI infrastructure continue to rise, Applied Digital is expected to face heightened competition that will remain an overhang on the growth prospects.
- ▼ Applied Digital announced plans to spin out Applied Digital Cloud and merge it with EKSO Bionics Holdings to form ChronoScale, a dedicated accelerated-compute platform for GPU-optimized AI infrastructure. Upon closing, expected in the first half of 2026, Applied Digital will retain over 80% ownership. While this transaction is intended to allow both businesses to scale independently with greater strategic and capital flexibility, it adds execution complexity and uncertainty during a critical period of data center buildout. The cloud business generated over \$60 million in trailing 12-month revenue with \$313 million in assets, but the separation process, integration with EKSO, and establishing ChronoScale as a standalone entity will require management attention and resources at a time when the core data center business is scaling rapidly.

Low-margin mix and cash burn persist while financing and schedule execution, plus high customer concentration, temper visibility and near-term profitability.

Last Earnings Report

Key Highlights

- Revenue: \$ 126.58 million, up 250% year over year from \$34.16 million.
- Net income (loss) from continuing operations per share: \$0, up from a loss of 1 cent in the prior-year quarter.
- Adjusted EBITDA: \$20.2 million versus \$6.12 million in the prior-year quarter.
- Data Center Hosting revenue: \$41.6 million, up 15% from \$36.2 million.
- HPC tenant fit-out revenue: \$73 million, a new component reflecting CoreWeave installations.

FY Quarter Ending **5/31/2025**

Earnings Reporting Date	Jan 07, 2026
Sales Surprise	66.67%
EPS Surprise	-22.22%
Quarterly EPS	-0.11
Annual EPS (TTM)	-0.50

Applied Digital reported a loss of 11 cents per share in the second quarter of fiscal 2026, an improvement from a loss of 61 cents reported in the year-ago quarter. The figure missed the Zacks Consensus Estimate by 22.22%.

Revenues jumped 250% year over year to \$126.6 million, driven by the ramp-up of HPC tenant fit-out services at Polaris Forge 1 and continued growth in the Data Center Hosting Business. The figure beat the Zacks consensus estimates by 66.67%.

APLD's Segment Performance

The Data Center Hosting Business generated \$41.6 million in revenues, up 15% year over year, with both Jamestown (106 MW) and Ellendale (180 MW) operating at full capacity as of Nov. 30.

The segment generated approximately \$16 million in operating profit during the quarter, operating on an asset base of \$130.8 million, demonstrating strong operational efficiency.

The HPC Hosting Business contributed \$85 million in revenues during the quarter. This included approximately \$73 million from tenant fit-out services for CoreWeave at Polaris Forge 1 and \$12 million in partial-quarter lease revenues as the first building became fully energized. The lease revenue reflects cash received during the quarter of approximately \$8 million.

APLD's Operating Details

Cost of revenues jumped 344% year over year to \$100.6 million, primarily reflecting \$69.5 million associated with tenant fit-out services for the HPC Hosting Business and increased energy costs for the Data Center Hosting Business.

Selling, general and administrative expenses surged 119% year over year to \$57 million, driven by \$23.8 million in stock-based compensation due to accelerated vesting of certain employee stock awards, \$4.7 million in professional services primarily related to legal work on discrete transactions and \$2.5 million in personnel expenses to support business growth.

Interest expense increased 292% year over year to \$11.5 million, primarily due to increased borrowing activity during the quarter. The company recognized a \$13.1 million gain on change in fair value of derivative related to its Babcock & Wilcox common stock warrant and a \$2.8 million gain on change in fair value of investment related to its Babcock & Wilcox common stock holdings. These non-cash gains were not present in the year-ago quarter.

APLD's Balance Sheet and Cash Flows

As of Nov. 30, Applied Digital held cash, cash equivalents and restricted cash of approximately \$2.3 billion compared with \$114.1 million as of Aug. 31. Total debt stood at approximately \$2.6 billion compared with \$687.3 million at the end of the first quarter of fiscal 2026. The substantial increase in both cash and debt reflects the company's successful completion of a \$2.35 billion senior secured notes offering during the quarter, issued at 97% of par with a 9.25% coupon due 2030. Proceeds were allocated to the construction of the first and second buildings at Polaris Forge 1, repayment of the SMBC loan and establishment of required debt service reserves.

Operating cash flow was negative \$97.9 million for the six months ended Nov. 30, 2025, reflecting construction scaling and early-stage HPC activity.

APLD Offers Positive Outlook

Applied Digital provided updates reflecting strong growth expectations for its data center portfolio. The company now has 600 MW under contract with two hyperscalers across Polaris Forge 1 and Polaris Forge 2, representing approximately \$16 billion in prospective lease revenues over approximately 15 years.

Lease revenues are expected to ramp significantly over the coming quarters as the second 150 MW building at Polaris Forge 1 comes online in mid-2026, and the third 150 MW building follows in 2027. Initial capacity at Polaris Forge 2 is anticipated in 2026, with full build-out expected in 2027.

The company is in advanced discussions with another investment-grade hyperscaler covering approximately 900 MW across three sites in the Dakota and select southern U.S. markets. APLD expects to begin construction on at least one new campus by the end of Jan. 2026, supported by a \$100 million development loan facility secured after quarter-end.

Applied Digital anticipates exceeding its long-term goal of \$1 billion in NOI within five years. The company plans to spin out its Cloud Services

Business and merge it with EKSO Bionics to form ChronoScale, with closing expected in the first half of 2026, and Applied Digital retaining over 80% ownership.

Recent News

2026

On March 04, APLD's subsidiary APLD ComputeCo 2 LLC announced that it has priced a \$2.15 billion offering of 6.750% senior secured notes due 2031 at an issue price of 98%. The Notes will be sold in a private offering and outside the United States to non-U.S. persons. The Offering is expected to close on or around March 10, 2026, subject to market and other conditions.

2025

On Jan. 22, Applied Digital announced that it has broken ground on Delta Forge 1, an AI Factory campus located in a strategic southern U.S. market. Delta Forge 1 is designed to support an initial 430 MW of total utility power, enabling up to 300 MW of critical IT load with the ability to scale considerably in 2028 and beyond.

On Dec. 29, Applied Digital and EKSO Bionics Holdings announced that it has entered into a non-binding agreement for a proposed business combination of the cloud computing business, Applied Digital Cloud, with EKSO, which, once closed, will go forward as ChronoScale, an accelerated compute platform purpose-built to support AI workloads.

On Dec. 18, Applied Digital announced that it has entered into a loan facility with Macquarie Group's Commodities and Global Market's business to fund the pre-lease development costs for new data center projects.

On Dec. 2, Applied Digital announced that it served as the lead investor in a \$25 million funding round for Corintis, a Swiss-based company developing advanced chip-cooling solutions designed to significantly improve efficiency and power density in data centers running the most demanding AI workloads.

On Nov. 24, Applied Digital announced the successful and on-time Ready for Service (RFS) for the second phase (50 MW) at the first 100 megawatt (MW) building at Building 1 of its Polaris Forge 1 AI Factory Campus in Ellendale, North Dakota. After achieving this milestone, Building 1 now operates at its full 100 MW critical IT load, marking the completion of the first of three contracted buildings at the campus.

Valuation

Applied Digital shares have appreciated 28.1% in the past six-month period and 365.1% over the trailing 12-month period. Stocks in the Zacks sub-industry dropped 32.2%, while those in the Zacks Finance sector are down 4.8% in the past six-month period. In the past year, stocks in the Zacks sub-industry are down 20.2%, whereas the sector is up 6.1%.

The S&P 500 index is down 0.8% in the past six-month period and up 18.1% in the past year.

The stock is currently trading at 16.25X forward 12-month sales compared with 2.6X for the Zacks sub-industry, 8.93X for the Zacks sector and 4.82X for the S&P 500 index.

Over the past five years, the stock has traded as high as 31.89X and as low as 0.62X, with a three-year median of 3.86X. Our Neutral recommendation indicates that the stock will perform in line with the market. Our \$30 price target reflects 16.13X forward 12-month earnings.

The table below shows summary valuation data for APLD.

Zacks Stock Rating System

We offer two rating systems that take into account investors' holding horizons: Zacks Rank and Zacks Recommendation. Each provides valuable insights into the future profitability of the stock and can be used separately or in combination with each other depending on your investment style.

Zacks Recommendation

The Zacks Recommendation aims to predict performance over the next 6 to 12 months. The foundation for the quantitatively determined Zacks Recommendation is trends in the company's estimate revisions and earnings outlook. The Zacks Recommendation is broken down into 3 Levels; Outperform, Neutral and Underperform. Unlike many Wall Street firms, we have an excellent balance between the number of Outperform and Neutral recommendations. Our team of 70 analysts are fully versed in the benefits of earnings estimate revisions and how that is harnessed through the Zacks quantitative rating system. But we have given our analysts the ability to override the Zacks Recommendation for the 1200 stocks that they follow. The reason for the analyst over-rides is that there are often factors such as valuation, industry conditions and management effectiveness that a trained investment professional can spot better than a quantitative model.

Zacks Rank

The Zacks Rank is our short-term rating system that is most effective over the one- to three-month holding horizon. The underlying driver for the quantitatively-determined Zacks Rank is the same as the Zacks Recommendation, and reflects trends in earnings estimate revisions.

Zacks Style Scores

The Zacks Style Score is as a complementary indicator to the Zacks rating system, giving investors a way to focus on the highest rated stocks that best fit their own stock picking preferences.

Academic research has proven that stocks with the best Value, Growth and Momentum characteristics outperform the market. The Zacks Style Scores rate stocks on each of these individual styles and assigns a rating of A, B, C, D and F. We also produce the VGM Score (V for Value, G for Growth and M for Momentum), which combines the weighted average of the individual Style Scores into one score. This is perfectly suited for those who want their stocks to have the best scores across the board.

Value Score	F
Growth Score	F
Momentum Score	F
VGM Score	F

As an investor, you want to buy stocks with the highest probability of success. That means buying stocks with a Zacks Recommendation of Outperform, which also has a Style Score of an A or a B.
