

Welcome and Getting Started Guide!

Welcome to **Managing Security in Google Cloud!**

By enrolling in this course, you'll be joining an international community of cloud information security analysts, architects, and engineers, Information security/cybersecurity specialists and Cloud infrastructure architects who are working to help their organizations secure their systems, networks and applications against cyberattack.

What to expect during this training course?

During this training course, you will be presented with a series of modules that will take you through the various aspects of Security in Google Cloud. The modules in this self-paced course have videos, lab exercises, and helpful knowledge-based links to aid you in your learning experience.

The four learning modules in this course are:

1. Foundations of Google Cloud Security
2. Securing Access to Google Cloud
3. Identity and Access Management (IAM)
4. Configuring Virtual Private Cloud for Isolation and Security
