Summary

Centrus operates in a tight uranium enrichment market, which supports pricing as Western utilities replace Russian supply. The company benefits from a large \$3.8B backlog, DOE waivers that support near-term deliveries and strong liquidity with government-backed funding for expansion. Its multi-billion-dollar enrichment buildout and HALEU roadmap position it well for long-term growth as advanced reactor demand rises. However, some risks remain. Much of the backlog is contingent and HALEU revenues are expected mainly later in the decade. Key government awards and fees are still under negotiation, and results can vary due to shipment timing and contract mix. Dependence on import waivers and high near-term investment adds to the uncertainty. With downward estimate revisions for 2026 and 2027, the overall risk-reward appears balanced in the near term.

Overview

Headquartered in Bethesda, MD, Centrus Energy Corp. supplies nuclear fuel components and enrichment services to utilities and government customers. The company's core offering is low-enriched uranium, or LEU, the fissile component used to fuel commercial nuclear reactors. Centrus also provides advanced uranium enrichment and technical, manufacturing, and engineering services.

The company's key technical operations are located in Oak Ridge, TN, and Piketon, OH. Centrus operates two reportable segments, the LEU segment and the Technical Solutions segment.

The LEU segment supplies the fissile component of nuclear fuel, primarily to utilities that operate commercial nuclear power plants. It mainly involves the enrichment component of LEU, which is measured in SWU. It also sells natural uranium hexafluoride, which is the raw material needed to produce LEU, and also occasionally sells uranium concentrates along with LEU and SWU components. The LEU segment generated \$346.2 million in revenues in fiscal 2025, representing approximately 77% of Centrus Energy's total revenues.

The Technical Solutions segment provides uranium enrichment for the nuclear industry and the U.S. government, and provides advanced manufacturing and other technical services for public and private customers. The Technical Solutions segment generated \$102.5 million of revenues in fiscal 2025, accounting for about 23% of total revenues.

Centrus is pioneering the production of High Assay Low-Enriched Uranium (HALEU), which will enable the deployment of a new generation of HALEU-fueled reactors to meet the world's growing need for carbon-free power. Under a contract with the Department of Energy (DOE), the Technical Solutions segment is operating uranium enrichment capacity for HALEU production.

Centrus has a diversified customer base spanning domestic and international markets. In fiscal 2025, domestic revenues were around 75% of total revenues and the balance 25% from foreign customers. The U.S. government and its contractors, in the company's Technical Solutions segment, accounted for approximately 23% of total revenues in fiscal 2025. The 10 largest LEU customers represented roughly 77% of total revenue in fiscal 2025.

Reasons To Buy:

- ▲ **Large-scale enrichment expansion and HALEU edge set stage for growth:** Centrus is spearheading efforts to rebuild the U.S. uranium enrichment supply chain after decades of underinvestment. In September 2025, the company unveiled a multi-billion-dollar expansion of its Piketon, OH, enrichment facility aimed at significantly increasing LEU and HALEU production. In December, it began design work on a 150,000 square foot training, operations & maintenance facility at the site. It also began domestic centrifuge manufacturing to support commercial LEU enrichment activities at the facility, reinforcing its first-mover advantage in U.S.-owned uranium enrichment. The company aims to leverage this multi-billion-dollar expansion to address more than \$2.3 billion in contingent LEU sales contracts with both domestic and international customers. It is targeting 12 metric tons of HALEU production per year sometime after 2030, with at least some HALEU production by the end of the decade. Centrus Energy is the only licensed producer of HALEU in the Western world. HALEU demand is expected to surge to power existing reactors and a new generation of advanced reactors. HALEU opportunity is estimated at \$8 billion per year by 2035, which provides a strategic advantage to the company.
- Multi-billion enrichment expansion, HALEU leadership, DOE-backed funding, \$3.8B backlog and tight SWU markets position Centrus for long-term growth and pricing power as nuclear fuel demand accelerates.
- ▲ **Non-dilutive public funding and strong liquidity de-risk expansion:** In January 2026, the company was selected for a \$900 million DOE HALEU enrichment task order, subject to negotiation, with milestone-based (procurement) funding that is non-dilutive. Centrus ended 2025 with approximately \$2 billion of unrestricted cash and believes it is sufficiently funded to meet near-term capital requirements. The company plans capital deployment of \$350-\$500 million in 2026, which includes long-lead procurement and supplier prepayments. Management is actively pursuing additional low-cost capital via national-security programs and prepay/offtake structures. This funding optionality supports schedule adherence through 2026-2029 without resorting to expensive capital in adverse markets. Centrus has partnered with Palantir to drive cost savings and unlock operational efficiencies in its expansion plans. They have already identified close to \$300 million in potential cost savings and operational efficiencies. Improving project execution remains a key priority, with Centrus actively taking steps to reduce risks and strengthen the efficiency of its expansion initiatives.
- ▲ **Structural tightness reinforces pricing power:** SWU spot prices reached record highs by the fourth quarter of 2025, and the LEU pricing curve rose steadily from 2019-2025. Management expects ongoing tightness toward the decade end, while near-term domestic LEU demand is expected to rise as Russian supply exits Western markets and restarts/uprates/new builds add needs. Against this backdrop, Centrus intends to maximize margin on sales while leveraging secured supply in the near term. DOE waivers permitting imports for committed U.S. deliveries in 2026-2027 add delivery continuity. Together, these dynamics support sustained pricing tailwinds and contract repricing over time, which should underpin profitability as shipments normalize and volumes align with customers' multi-year fuel cycles. The consensus estimates for revenues for 2026 sit near the midpoint of management's guidance.
- ▲ **Backlog depth provides multi-year revenue optionality:** As of Dec. 31, 2025, total backlog was \$3.8 billion, extending to 2040. This includes roughly \$2.9 billion in the LEU segment and about \$0.9 billion in Technical Solutions. Within LEU, approximately \$2.3 billion is contingent to support potential capacity construction, including \$2.1 billion under definitive agreements and \$0.2 billion pending definitive agreements. The breadth and duration of the backlog validate demand and create a path for conversion as capacity and funding milestones are achieved, supporting steadier order flow despite inherent quarterly variability.
-

Reasons To Sell:

- ▼ **Earnings variability from logistics and contract timing:** Centrus Energy's quarterly results remain sensitive to shipment timing and operational logistics. A scheduled fourth-quarter shipment was postponed to the first quarter. Management had stated that it would have lowered the average cost per SWU and lifted gross margin and net income if the shipment was received as planned. While the first quarter of 2026 results will benefit from the delayed shipment, these dynamics can still pressure quarter-to-quarter predictability and valuation until the build-out yields a more stable operating cadence. This was evident in the company's latest negative earnings per share surprise and in the wide ranges around revenue estimates for the next four quarters, which reflect uncertainty on delivery timing and mix.
- ▼ **HALEU contract and fee negotiations remain unsettled:** The \$900 million DOE HALEU enrichment task order announced in January 2026 is subject to final negotiation and milestone-based funding. The nature, timing and amount remain uncertain, which can shift project cash flows and planning. In parallel, the HALEU Operations Contract Phase 2 was extended through Jan. 31, 2026, and costs incurred after November 2024 are under an undefinitized portion not yet subject to a fee, pending negotiation; outcomes which could influence Technical Solutions revenues and fees. These unresolved terms across key HALEU workstreams introduce near-term uncertainty in contribution timing just as the company ramps up supplier onboarding and site mobilization in 2026. Reflecting this, the earnings estimates for 2026 and 2027 have been revised lower over the past month.
- ▼ **Backlog quality and policy overhang on conversions:** As of Dec. 31, 2025, approximately \$2.3 billion of LEU backlog is contingent and depends on removing contingencies and securing substantial public and private investment. The fiscal 2026 guidance assumes no significant change in the ability to receive and sell Russian LEU. Currently, DOE waivers allow imports of Russian LEU for Centrus' already-committed U.S. deliveries in 2026-2027. However, imports after 2027 remain uncertain due to the statutory and regulatory framework governing Russian material. Any tightening of import permissions, shipping or logistics disruptions, or need to revise contracts to reflect alternative supply could affect delivery schedules, costs, or margins.
- ▼ **Long-dated HALEU monetization and execution risk:** The first new cascade is expected online in 2029, with some HALEU production planned before the decade end and 12 MT per year shortly thereafter. Capacity additions will be progressive and contingent on customer offtake and available capital. Fiscal 2026 total capital deployment of \$350-\$500 million will not represent a steady-state run-rate, with manufacturing-related spend expected to become more linear across 2027-2029. This timeline delays meaningful HALEU scale and keeps near-term earnings more exposed to LEU shipment timing and contract mix. Any slippage in milestones or slower offtake conversion would push out cost reductions and scale benefits, extending the period of elevated spending ahead of revenue expansion.

Long timelines, award uncertainty, policy dependence, shipment volatility, and heavy 2026 investment could strain the near-term results for Centrus Energy.

Last Earnings Report

Centrus Energy's Q4 Earnings Miss Estimates While Revenues Match

Centrus Energy reported fourth quarter 2025 earnings per share of 79 cents which missed the Zacks Consensus Estimate of \$1.42. The bottom line marked a sharp 75% decline from \$3.20 in the year-ago quarter.

A scheduled late-quarter shipment from Russia did not depart in time and was shifted into the first quarter of 2026. Management stated this shipment would have reduced average cost per SWU and supported higher gross margins and net income (or earnings) in the fourth quarter of 2025 if received as planned. This delayed benefit should reflect in the company's first quarter results if received as expected.

Centrus Energy's quarterly revenue declined 3.6% year over year to \$146.2 million but came in line with the Zacks Consensus Estimate.

Total cost of sales rose 24%, resulting in a 43% year-over-year slump in gross profit to \$35 million. Gross margin declined as uranium sales weakness and lower Technical Solutions profitability offset SWU volume gains. Operating income plunged 72% to \$12.8 million. Operating margin contracted sharply to 9% from 30% a year earlier.

Centrus Energy's Segment Performances in Q4

Revenues for the Low-Enriched Uranium segment rose 2% year over year to \$124.4 million. This was mainly led by separative work unit revenues which surged 128% year over year to \$111.0 million, reflecting strong delivery timing. Conversely, uranium revenue collapsed 82% to \$13.4 million. The company had made a substantial one-time uranium sale in the fourth quarter of 2024.

The Technical Solutions segment's revenue declined 27% to \$21.8 million.

Centrus Energy's Performance in Fiscal 2025

For 2025, Centrus Energy's total revenues were \$448.7 million, up 2% from the prior year. The LEU segment's revenues were at \$346.2 million, down 1% year over year. In Technical Solutions, full-year revenue increased 11% to \$102.5 million,

Adjusted earnings per share was \$3.90 in 2025 compared with \$4.47 in 2024.

Centrus Energy's Backlog & Capital Position as of 2025 End

As of Dec. 31, 2025, total company backlog was \$3.8 billion which extends to 2040, comprising approximately.

The LEU backlog is at \$2.9 billion which includes roughly \$2.3 billion of contingent contracts and commitments, with most already under definitive agreements.

The company ended 2025 with approximately \$2 billion of unrestricted cash. Operating cash flow for 2025 was \$51million compared with \$37 million in 2024.

Centrus Energy's Guidance for 2026

For fiscal 2026, Centrus guides total revenue between \$425-\$475 million. The midpoint of the range suggests flat year over year results.

Capital deployment for the year is budgeted at \$350-\$500 million, taking into account increased investment in the industrial build out related to its centrifuge manufacturing.

Key milestones for 2026 include finalizing critical supplier contracts, releasing the first Certified-for-Construction work package in Piketon, completing majority construction partner mobilization in Ohio by year-end, and adding at least 150 new employees at Oak Ridge and Piketon facilities.

FY Quarter Ending **12/31/2025**

Earnings Reporting Date	Feb 10, 2026
Sales Surprise	0.55%
EPS Surprise	-44.37%

Recent News

Centrus Partners With Palantir to Enhance Efficiency in Expansion Plans

Centrus Energy announced on **March 12** a partnership with Palantir Technologies, a leading provider of AI-driven software platforms. Under the collaboration, Centrus is deploying Palantir's Foundry and Artificial Intelligence Platform (AIP) to connect data across classified and unclassified systems while applying AI to streamline project controls, engineering, manufacturing execution, supply chain operations, and regulatory compliance.

Since the partnership began in late January, Centrus Energy and Palantir have already identified close to \$300 million in potential cost savings and operational efficiencies. Improving project execution remains a key priority, with Centrus actively taking steps to reduce risks and strengthen the efficiency of its expansion initiatives.

Centrus & OKLO Announce Planned JV to Advance Nuclear Fuel Services in Ohio

Centrus Energy on March 9 announced it has entered into discussions with Oklo Inc. to explore a joint venture focused on deconversion services for HALEU and the advancement of related fuel-cycle technologies and supply chains. The collaboration would operate at the Piketon site, adjacent to Oklo's planned 1.2-gigawatt nuclear power campus, potentially improving supply-chain efficiency and expanding domestic nuclear fuel capacity.

Centrus Teams Up with Fluor to Advance Enrichment Capacity Expansion

Centrus, on **Feb. 11**, announced that its subsidiary, American Centrifuge Operating, LLC, has entered into a strategic collaboration with Fluor, which will serve as the Engineering, Procurement and Construction (EPC) contractor for Centrus' multi-billion-dollar expansion of uranium enrichment capacity in Piketon. Under the multi-year agreement, Fluor will handle the engineering and design for the expanded facility, manage supply chain and procurement activities, oversee construction at the site, and assist with commissioning the new enrichment capacity.

Centrus Commits \$560M to Expand Oak Ridge Centrifuge Manufacturing Plant

Centrus on **Jan 23**, announced plans for significant expansion in transitioning its Oak Ridge facility to a high-rate manufacturing plant. The project is expected to create nearly 430 jobs and involve more than \$560 million in investment in Anderson County over the coming years.

Centrus Awarded \$900M by DOE to Expand Uranium Enrichment in Ohio

Centrus on Jan 6 announced that it has been selected by the U.S. Department of Energy (DOE) for a \$900 million task order to expand its uranium enrichment facility in Piketon, enabling commercial-scale production of HALEU. The company plans to use the competitively awarded federal funding to support its multi-billion-dollar expansion at Piketon, which will also include additional LEU production to supply commercial utilities and the existing reactor fleet.

The fixed-price base task order amount for the award is \$900 million to bring new enrichment capacity online. The award also includes options (at the Department's discretion) for up to \$170 million to produce and deliver HALEU to the Department. Thus, the total task order contract value with all options can go up to \$1.07 billion.

Centrus Begins Centrifuge Manufacturing to Enable Commercial LEU Enrichment

Centrus Energy on **Dec 19** announced that it has begun domestic centrifuge manufacturing to support commercial LEU enrichment activities at its Piketon facility. The move positions the company to leverage its first-mover advantage in U.S.-owned domestic uranium enrichment, representing a major milestone for both Centrus and the broader U.S. nuclear fuel supply chain.

Valuation

Centrus Energy Corp. shares declined 6.2% over the past three months but are up 180.9% over the past year. The Zacks sub-industry and the Zacks Basic Materials sector rose 20.2% and 22.6% in the past three months, and 60.9% and 51.2% over the past year, respectively. The S&P 500 increased 0.4% in the past three months and 21.6% over the past year.

The stock is currently trading at 65.35X forward 12-month earnings, which compares with 23.08X for the Zacks sub-industry, 15.36X for the Zacks sector and 21.6X for the S&P 500 index.

Over the past five years, the stock has traded as high as 130.91X and as low as 5.79X, with a 5-year median of 16.05X.

Our Neutral recommendation indicates that the stock will perform in-line with the market. Our \$226 price target reflects 68.74X forward 12-month earnings.

Zacks Stock Rating System

We offer two rating systems that take into account investors' holding horizons: Zacks Rank and Zacks Recommendation. Each provides valuable insights into the future profitability of the stock and can be used separately or in combination with each other depending on your investment style.

Zacks Recommendation

The Zacks Recommendation aims to predict performance over the next 6 to 12 months. The foundation for the quantitatively determined Zacks Recommendation is trends in the company's estimate revisions and earnings outlook. The Zacks Recommendation is broken down into 3 Levels; Outperform, Neutral and Underperform. Unlike many Wall Street firms, we have an excellent balance between the number of Outperform and Neutral recommendations. Our team of 70 analysts are fully versed in the benefits of earnings estimate revisions and how that is harnessed through the Zacks quantitative rating system. But we have given our analysts the ability to override the Zacks Recommendation for the 1200 stocks that they follow. The reason for the analyst over-rides is that there are often factors such as valuation, industry conditions and management effectiveness that a trained investment professional can spot better than a quantitative model.

Zacks Rank

The Zacks Rank is our short-term rating system that is most effective over the one- to three-month holding horizon. The underlying driver for the quantitatively-determined Zacks Rank is the same as the Zacks Recommendation, and reflects trends in earnings estimate revisions.

Zacks Style Scores

The Zacks Style Score is as a complementary indicator to the Zacks rating system, giving investors a way to focus on the highest rated stocks that best fit their own stock picking preferences.

Academic research has proven that stocks with the best Value, Growth and Momentum characteristics outperform the market. The Zacks Style Scores rate stocks on each of these individual styles and assigns a rating of A, B, C, D and F. We also produce the VGM Score (V for Value, G for Growth and M for Momentum), which combines the weighted average of the individual Style Scores into one score. This is perfectly suited for those who want their stocks to have the best scores across the board.

Value Score	F
Growth Score	F
Momentum Score	B
VGM Score	F

As an investor, you want to buy stocks with the highest probability of success. That means buying stocks with a Zacks Recommendation of Outperform, which also has a Style Score of an A or a B.

This report and others like it are published regularly and not in response to episodic market activity or events affecting the securities industry.

This report is not to be construed as an offer or the solicitation of an offer to buy or sell the securities herein mentioned. ZIR or its officers, employees or customers may have a position long or short in the securities mentioned and buy or sell the securities from time to time. ZIR is not a broker-dealer. ZIR may enter into arms-length agreements with broker-dealers to provide this research to their clients. Zacks and its staff are not involved in investment banking activities for the stock issuer covered in this report.

ZIR uses the following rating system for the securities it covers. **Outperform-** ZIR expects that the subject company will outperform the broader U.S. equities markets over the next six to twelve months. **Neutral-** ZIR expects that the company will perform in line with the broader U.S. equities markets over the next six to twelve months. **Underperform-** ZIR expects the company will underperform the broader U.S. equities markets over the next six to twelve months.

No part of this report can be reprinted, republished or transmitted electronically without the prior written authorization of ZIR.
