Rezumat

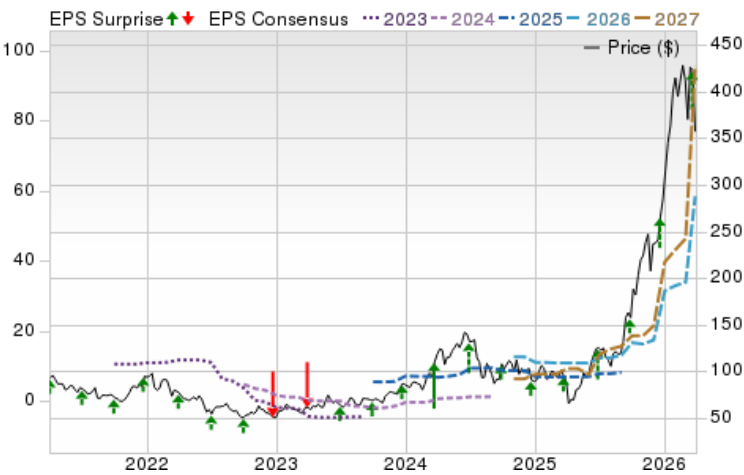

Micron beneficiază de piețele de memorie și stocare bazate pe inteligență artificială (IA) aflate în rapidă expansiune. Impactul pozitiv al îmbunătățirii stocurilor pe multiple piețe finale stimulează creșterea veniturilor. Cererea tot mai mare de HBM și redresarea robustă a prețurilor DRAM vor contribui la o creștere semnificativă a veniturilor și a câștigurilor în trimestrele următoare. Situațiile financiare solide, fluxul de numerar disponibil pozitiv și bilanțul solid oferă flexibilitatea de a investi în inițiative de creștere, sporind în același timp valoarea pentru acționari. Acordurile pe termen lung cu clienții și parteneriatele în expansiune legate de IA reduc volatilitatea și sporesc vizibilitatea veniturilor. Acțiunile companiei au depășit performanța sectorului în ultimele șase luni. Cu toate acestea, creșterea costurilor operaționale și o creștere masivă a cheltuielilor de capital reprezintă un risc negativ pentru profitabilitatea pe termen scurt a Micron.

Prezentare generală

Micron Technology, cu sediul în Idaho, s-a impus ca unul dintre principalii furnizori mondiali de soluții de memorie pentru semiconductori.

Prin intermediul unor mărci globale, și anume Micron, Crucial și Ballistix, Micron produce și comercializează tehnologii de memorie și stocare de înaltă performanță, inclusiv memorie dinamică cu acces aleatoriu (DRAM), memorie flash NAND, memorie flash NOR, memorie 3D XPoint și alte tehnologii. Soluțiile sale sunt utilizate în produse de calcul de ultimă generație, pentru consumatori, rețele și produse mobile. Misiunea companiei este de a fi cel mai eficient și inovator furnizor global de soluții de memorie pentru semiconductori.

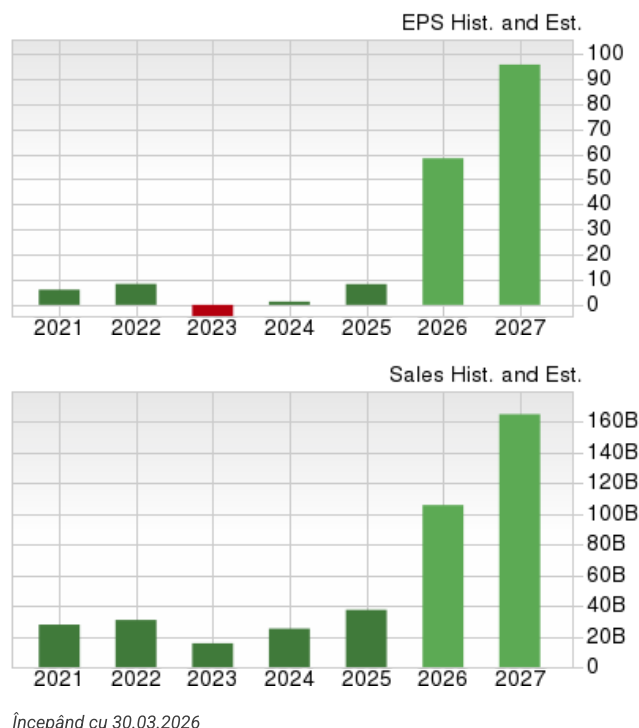

Micron a raportat venituri de 37,38 miliarde de dolari în anul fiscal 2025. Din punct de vedere tehnologic, compania își raportează rezultatele financiare în trei categorii - DRAM, NAND și Altele. O mare parte a veniturilor provine din vânzările de DRAM, care au reprezentat 76,4% din veniturile totale ale anului fiscal 2025. Categoriile NAND și Altele au contribuit cu 22,7%, respectiv 0,9%.

Micron prezintă, de asemenea, performanța financiară pe unități de afaceri. Anterior, compania își raporta segmentele de afaceri ca Unitatea de afaceri Calcul și Rețele, Unitatea de afaceri Mobilă, Unitatea de afaceri Integrată și Unitatea de afaceri Stocare.

În trimestrul al patrulea al anului fiscal 2025, Micron și-a reorganizat segmentele de afaceri în Cloud Memory Business Unit („CMBU”), Core Data Business Unit („CDBU”), Mobile and Client Business Unit („MCBU”) și Auto and Embedded Business Unit („AEBU”).

Pe segmente de afaceri, veniturile din CMBU au crescut cu 257% față de anul precedent, ajungând la 13,52 miliarde de dolari în anul fiscal 2025. Veniturile din CDBU au crescut cu 45%, ajungând la 7,23 miliarde de dolari. Vânzările din MCBU au crescut cu 2%, ajungând la 11,86 miliarde de dolari, în timp ce cele din AEBU au crescut cu 3%, ajungând la 4,75 miliarde de dolari.

Compania se luptă cu o concurență intensă din partea Intel, Samsung Electronics, SK Hynix, Toshiba Memory și Western Digital Corporation.

Motive pentru a cumpăra:

Performanța Micron în al doilea trimestru al anului fiscal 2026, mai bună decât se aștepta, reflectă câștigurile obținute din îmbunătățirea condițiilor de piață, execuția puternică a vânzărilor și creșterea de două cifre în mai multe unități de afaceri. Creșterea veniturilor Micron față de trimestrul precedent reflectă cererea puternică de cipuri de memorie pe piața centrelor de date și impactul pozitiv al îmbunătățirii stocurilor pe alte piețe, cum ar fi industria auto, industrială și altele. Compania a furnizat o prognoză solidă pentru trimestrul curent privind continuarea cererii puternice de cipuri de memorie. Se anticipează că prețurile DRAM vor continua să crească pe termen scurt, ceea ce va stimula și mai mult creșterea veniturilor Micron. Beneficiile în materie de prețuri vor fi probabil determinate de creșterea cererii de servere AI, provocând o lipsă de disponibilitate a consumabilelor DRAM de ultimă generație.

Micron mizează pe revigorarea cererii de DRAM și pe creșterea mixului de soluții de înaltă valoare din portofoliul său.

Micron is capitalizing on the AI boom with its HBM solutions, which are increasingly being adopted by major hyperscalers and enterprise customers. On the second-quarter fiscal 2026 earnings call, the company highlighted strong customer interest in its HBM portfolio, which is expected to drive substantial revenue growth in the quarters ahead. Micron's HBM portfolio is generating multi-billion-dollar quarterly revenues. Micron is poised to be the key beneficiary of surging AI-related infrastructure spending, as companies continue to build out GPU clusters and AI data centers that require advanced memory solutions.

The ongoing momentum in the DRAM market is a major tailwind for Micron. DRAM revenues accounted for more than 79% of Micron's total sales in the second quarter of fiscal 2026 and increased 74% sequentially, driven by growth in DRAM shipments and continued improvement in pricing. The pricing rebound, coupled with cost efficiencies, will boost the gross margin. Non-GAAP gross margin of 74.9% for the second quarter of fiscal 2026 reflects a robust improvement from the year-ago quarter's 37.9% and the previous quarter's 56.8%. The DRAM supply-demand balance is anticipated to tighten further in the coming quarters, driving additional pricing strength. This will support Micron's margin expansion and profitability, especially as AI-related DRAM demand accelerates. For the third quarter, Micron projects a non-GAAP gross margin of approximately 81%, indicating an improvement of 610 basis points from the second quarter.

Micron's decision to sell its Utah factory as it quits making 3D XPoint memory chips has helped it shift resources toward accelerating the market introduction of Compute Express Link ("CXL")-enabled memory products. The technology maintains memory coherency between a host, such as the CPU memory space, and a device. This allows resource sharing for higher performance while reducing software stack complexity and overall system costs. The CXL technology is expected to be used in heterogeneous computing systems, including artificial intelligence (AI), machine learning and data analytics. The shift in the portfolio strategy is likely to further strengthen Micron's focus on developing memory and storage products and solutions for the data center.

Micron is expanding its foothold in the SSD storage market. The emergence of thinner laptops and tablets over the past few years has created ideal market conditions for SSDs, which are now entering the higher end of the market. Furthermore, secular growth of digital data, modest growth in TAM and higher demand for storage will drive growth in general, and especially for SSDs. Per the Mordor Intelligence report, the SSD market is expected to witness a CAGR of 16.03% between 2026 and 2031 and reach \$76.41 billion by 2031. The SSD segment's growth potential is a major positive for Micron, as this could offset the losses incurred from the sluggishness in the PC market, which does not necessarily use SSDs.

Over the years, Micron has made several significant acquisitions to enhance its capabilities. Over the last two decades, the company has acquired 14 businesses. Most recently, in March 2026, the company completed the acquisition of the Powerchip Semiconductor Manufacturing Corporation (PSMC) facility in Taiwan. The buyout has enhanced Micron's manufacturing space. A few other notable acquisitions are IM Flash Technologies, FWDNXT, Elpida, Inotera, Numonyx and Lexar Media. These buyouts have helped Micron expand its wafer manufacturing capacity, DRAM offerings, and wafer testing and probe services.

Micron is strengthening its industry partnerships to capitalize on AI and data center growth. The company is deepening collaborations with leading hyperscalers, AI model developers and GPU providers. The company is actively engaged in long-term agreements with NVIDIA, AMD and Intel, enabling Micron to capture a larger share of the AI infrastructure market. Additionally, Micron's focus on long-term supply agreements with major cloud and enterprise customers ensures stable revenue streams and reduces the risk of pricing volatility. These partnerships are expected to contribute meaningfully to revenue growth in the coming quarters.

Micron is a cash-rich company with a strong balance sheet. The company exited the second quarter of fiscal 2026 with cash and investments of \$16.7 billion and total liquidity of \$20.2 billion. A strong cash balance and liquidity position provide the company with the liberty to pursue strategic acquisitions, invest in growth initiatives and enhance its shareholders' returns with dividend payments and share repurchases. Micron has a strong cash-flow generating ability, which enables it to improve its cash balance and lower debt. The company generated an operating cash flow of \$20.31 billion in the first half of fiscal 2026. It spent \$9.5 billion on capital expenditure in the first half, resulting in a free cash flow of \$10.81 billion. In the first half of fiscal 2026, it repurchased shares worth \$650 million and paid \$266 million in dividends.

Risks⁽²⁾

- Micron's operating expenses have been rising due to increased research & development investments and higher compensation costs. In the first quarter of fiscal 2025, non-GAAP operating expenses rose to \$1.33 billion, up 27% from the year-ago quarter. Non-GAAP operating expenses increased 35% year over year to \$1.42 billion in the second quarter. Looking ahead to the third quarter of fiscal 2026, Micron expects operating expenses to grow approximately 24%, primarily driven by increased R&D investments related to data center product innovation and development. While these investments are crucial for future growth, the immediate impact is likely to be higher costs, which could weigh on margins. Rising operating costs, combined with macroeconomic uncertainty, pose a downside risk to Micron's near-term profitability.
- Micron's fate is highly tied to DRAM and NAND flash pricing. Oversupply and lower-than-expected growth in end-market demand has been a dampener. A higher level of customer inventory in the cloud, graphics and enterprise market is a key threat. Moreover, soft server demand

from several enterprise OEM customers is a concern. Additionally, Intel's CPU shortages coupled with macroeconomic uncertainties are likely to pose key challenges to the company.

- Micron's capital expenditures (capex) for fiscal 2026 are projected to be more than \$25 billion, way higher than the fiscal 2025 capex of \$13.8 billion. Increased capex reflects the company's continued investments in expanding its 1γ DRAM and HBM portfolio. While these investments are aimed at capturing future demand, they come with significant risk, especially if the anticipated growth in AI-driven demand falls short. A high Capex burden could strain Micron's free cash flow, limiting its flexibility in managing downturns or capitalizing on opportunities. If demand fluctuates or pricing weakens, Micron may face cash flow issues, negatively impacting shareholder returns. High capital intensity, combined with market volatility, is a notable concern for long-term investors.
- The United States and China's tit-for-tat trade war is a major threat to the company. This is because the United States is the largest semiconductor manufacturing country with China being its biggest importer. Micron's heavy dependence on China is anticipated to keep the company under pressure, at least in the near term. Over the past year, the Netherlands and Japan also joined the United States to restrict China from making advanced chips. The tit-for-tat actions could jeopardize Micron's prospects. Chip sales in China make up approximately 11% of Micron's total revenues.
- Micron faces competition from Samsung Electronics Co., Ltd., SK Hynix Inc., Spansion Inc. and Toshiba Corporation in the semiconductor memory market. Notably, wafer capacity increases from its competitors could disrupt DRAM and NAND supply dynamics affecting prices and the company's results. Moreover, heightening trade tension might compel many Chinese companies to buy chips from Samsung and other non-American chipmakers, consequently dumping Micron.
- Ramped-up production of domestic memory chips in China can also seriously jeopardize Micron's prospects going forward. Changxin Memory Technologies has unveiled China's first domestically designed DRAM chip. Moreover, Yangtze Memory Technologies is likely to start manufacturing NAND flash memory to challenge Samsung, Toshiba, Western Digital and Micron, per Nikkei.
- Micron continues to acquire a large number of companies. While this improves revenue opportunities, business mix and profitability, it also adds to integration risks. Moreover, frequent acquisitions are a distraction for management, which could impact organic growth, going forward. Additionally, a higher mix of NAND, which has a lower gross margin, coupled with falling memory prices and minimal decline in manufacturing cost is likely to keep margins under pressure.

Last Earnings Report

Micron Q2 Earnings Crush Estimates, Q3 Guidance Above Street View

Micron reported better-than-expected second-quarter fiscal 2026 results and provided strong guidance for the third quarter. The memory chipmaker reported second-quarter earnings of \$12.20 per share, beating the Zacks Consensus Estimate by 38.57%. The company's second-quarter earnings jumped 682% from the year-ago quarter's \$1.56 per share.

Micron Technology's revenues soared 196% year over year to \$23.86 billion and surpassed the Zacks Consensus Estimate by 21.67%. The top line was driven by robust demand for its high bandwidth memory (HBM) products.

Buoyed by the better-than-expected financial performance, Micron Technology issued strong guidance for the third quarter of fiscal 2026. The company's forecast for the top and bottom lines was above the Zacks Consensus Estimate.

Micron Q2 Top-Line Details

Technology-wise, DRAM revenues of \$18.8 billion, accounting for 79% of the total revenues in the fiscal second quarter, increased 207% year over year and 74% sequentially. The robust sequential increase was mainly driven by mid-single-digit growth in bit shipments and a mid-60s percentage rise in average selling prices. The company experienced strong demand for data center DRAM, boosted by solid growth in HBM and robust performance of high-capacity DIMMs and low-power server DRAM products.

NAND revenues of \$5 billion, representing 21% of the total revenues, were up 169% year over year and 82% sequentially. The robust sequential increase was mainly driven by low single-digit growth in bit shipments and a high-70s percentage rise in average selling prices.

Other revenues were \$95 million in the reported quarter, which increased from \$75 million in the year-ago quarter and was up from \$88 million in the previous quarter.

Previously, Micron used to report its business segments as follows: Compute and Networking Business Unit, Mobile Business Unit, Embedded Business Unit and Storage Business Unit. Following the reorganization, its disclosure of business segments is as follows: Cloud Memory Business Unit, Core Data Center Business Unit, Mobile and Client Business Unit and Auto and Embedded Business Unit.

Business segment-wise, revenues of \$7.75 billion from the Cloud Memory Business Unit soared 163% from the year-ago quarter and 47% sequentially, driven by an increase in prices and a favorable mix.

Revenues of \$4.69 billion from the Core Data Center Business Unit grew 211% on a year-over-year basis and surged 139% on a quarter-over-quarter basis due to higher pricing and an increase in bit shipments.

The Mobile and Client Business Unit's revenues were \$7.71 billion, up 245% from the year-ago period and up 81% from the previous quarter, aided by higher pricing but partially offset by lower bit shipments. Revenues from the Auto and Embedded Business Unit totaled \$2.71 billion, which

FY Quarter Ending **8/31/2025**

Earnings Reporting Date	Mar 18, 2026
Sales Surprise	21.67%
EPS Surprise	38.64%
Quarterly EPS	12.20
Annual EPS (TTM)	21.92

increased 162% year over year and 57% sequentially, driven by higher pricing but partially offset by lower bit shipments.

Micron's Q2 Operating Details

For the fiscal second quarter, MU posted a non-GAAP gross profit of \$7.75 billion, up 486% year over year and 131% sequentially. The fiscal second-quarter non-GAAP gross margin of 74.9% improved from the year-ago quarter's 37.9% and the previous quarter's 56.8%.

Non-GAAP operating expenses were \$1.42 billion compared with the previous quarter's \$1.33 billion and the year-ago quarter's \$1.05 billion.

Micron Technology's non-GAAP operating income of \$16.46 billion was higher than the previous quarter's non-GAAP operating income of \$6.42 billion. It also shows significant improvements from the year-ago quarter's non-GAAP operating income of \$2.01 billion.

The non-GAAP operating margin came in at 69%. Micron Technology posted a non-GAAP operating margin of 47% for the previous quarter, and it had a non-GAAP operating margin of 24.9% in the year-ago quarter.

Micron's Balance Sheet & Cash Flow

MU exited the reported quarter with cash and investments of \$16.7 billion compared with \$12.02 billion at the end of the previous quarter. Its total debt, as of Feb. 26, 2026, was \$9.56 billion compared with the \$11.19 billion witnessed at the end of the previous quarter.

The company generated an operating cash flow of \$11.9 billion in the fiscal second quarter. It spent \$5 billion on capital expenditure in the quarter, resulting in an adjusted free cash flow of \$6.9 billion. In the first half of fiscal 2026, the company generated operating cash flow and free cash flow of \$20.31 billion and \$10.81 billion, respectively.

MU paid out \$132 million in dividends and repurchased shares worth \$350 million in the second quarter of fiscal 2026. In the first half of fiscal 2026, it repurchased shares worth \$650 million and paid \$266 million in dividends.

Micron's Q3 Outlook

MU provided its guidance for the third quarter of fiscal 2026. The company anticipates revenues of \$35.5 billion (+/- \$750 million) in the fiscal third quarter. For the fiscal third quarter, Micron Technology projects a non-GAAP gross margin of approximately 81%. Operating expenses on a non-GAAP basis are estimated to be approximately \$1.4 billion. Adjusted EPS is anticipated to be \$19.15 (+/- 40 cents).

Recent News

On March 16, Micron Technology announced that it has begun high-volume production of HBM4 memory, PCIe Gen6 SSDs and SOCAMM2 modules designed for NVIDIA platforms to support AI and high-performance computing workloads.

On March 3, Micron announced shipping customer samples of the industry's highest-capacity LPDRAM module — 256GB SOCAMM2.

On Feb. 28, Micron announced the grand opening of its semiconductor assembly and test facility in Sanand, Gujarat, India.

On Jan. 26, Micron announced its plan to invest approximately \$24 billion over 10 years on building an advanced wafer fabrication facility located within the company's existing NAND manufacturing complex in Singapore.

On Jan. 17, Micron announced that it has signed an exclusive Letter of Intent to acquire Powerchip Semiconductor Manufacturing Corporation's P5 fabrication site in Tongluo, Miaoli County, Taiwan, for total cash consideration of \$1.8 billion.

On Jan. 16, Micron officially break ground on its \$100 billion leading-edge memory manufacturing complex in Onondaga County, New York.

On Jan. 6, Micron launched the Micron 3610 NVMe SSD, the industry's first PCIe Gen5 G9 QLC client SSD, delivering up to 11,000 MB/s reads and offering 4TB capacity in a single-sided M.2 2230 form factor.

On Dec. 3, Micron announced that it would exit the Crucial consumer business, including the sale of Crucial consumer-branded products at key retailers, e-tailers and distributors worldwide, by the end of the second quarter of fiscal 2026.

Valuation

Shares of Micron have surged 39.9% in the trailing three months and 153.4% over the past six months. Stocks in the Zacks sub-industry have returned 7%, while the Zacks Computer & Technology sector has declined 6.5% in the last three months. In the past six months, the Zacks sub-industry has appreciated 41%, while the sector has declined 1.7%.

The S&P 500 Index has declined 5.1% in the trailing three months while has remained flat in the past six months.

The stock is currently trading at 3.65x forward 12-month sales, which compares with 3.95x for the Zacks sub-industry, 5.91x for the Zacks sector, and 4.85x for the S&P 500 index.

Over the past five years, the stock has traded as high as 6.08x and as low as 1.59x, with a five-year median of 3.02x. Our Outperform recommendation indicates that the stock will perform better than the market. Our \$455 price target reflects 4.20x forward 12-month sales.

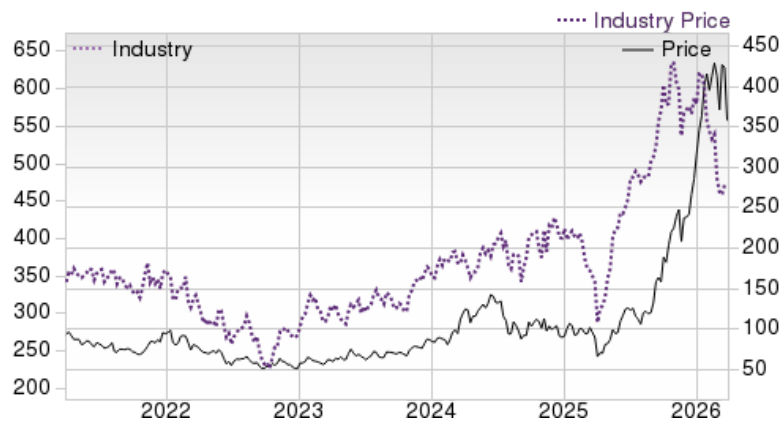

The table below shows a summary of valuation data for MU.

Zacks Stock Rating System

We offer two rating systems that take into account investors' holding horizons: Zacks Rank and Zacks Recommendation. Each provides valuable insights into the future profitability of the stock and can be used separately or in combination with each other depending on your investment style.

Zacks Recommendation

The Zacks Recommendation aims to predict performance over the next 6 to 12 months. The foundation for the quantitatively determined Zacks Recommendation is trends in the company's estimate revisions and earnings outlook. The Zacks Recommendation is broken down into 3 Levels; Outperform, Neutral and Underperform. Unlike many Wall Street firms, we have an excellent balance between the number of Outperform and Neutral recommendations. Our team of 70 analysts are fully versed in the benefits of earnings estimate revisions and how that is harnessed through the Zacks quantitative rating system. But we have given our analysts the ability to override the Zacks Recommendation for the 1200 stocks that they follow. The reason for the analyst over-rides is that there are often factors such as valuation, industry conditions and management effectiveness that a trained investment professional can spot better than a quantitative model.

Zacks Rank

The Zacks Rank is our short-term rating system that is most effective over the one- to three-month holding horizon. The underlying driver for the quantitatively-determined Zacks Rank is the same as the Zacks Recommendation, and reflects trends in earnings estimate revisions.

Zacks Style Scores

The Zacks Style Score is as a complementary indicator to the Zacks rating system, giving investors a way to focus on the highest rated stocks that best fit their own stock picking preferences.

Academic research has proven that stocks with the best Value, Growth and Momentum characteristics outperform the market. The Zacks Style Scores rate stocks on each of these individual styles and assigns a rating of A, B, C, D and F. We also produce the VGM Score (V for Value, G for Growth and M for Momentum), which combines the weighted average of the individual Style Scores into one score. This is perfectly suited for those who want their stocks to have the best scores across the board.

Value Score	C
Growth Score	A
Momentum Score	A
VGM Score	A

As an investor, you want to buy stocks with the highest probability of success. That means buying stocks with a Zacks Recommendation of Outperform, which also has a Style Score of an A or a B.

Dezvăluiri

Acest raport conține comentarii independente care trebuie utilizate exclusiv în scop informativ. Analistii care contribuie la acest raport nu dețin acțiuni ale acestor acțiuni. Analistii care contribuie la acest raport nu fac parte din consiliul de administrație al companiei care a emis aceste acțiuni. Previziunile privind EPS și veniturile sunt estimările Zacks Consensus, cu excepția cazului în care se specifică altfel în nota de subsol de pe prima pagină a raportului. În plus, analistii care contribuie la acest raport certifică faptul că opiniile exprimate aici reflectă cu exactitate opiniile personale ale analiștilor cu privire la valorile mobiliare și emitenții în cauză. ZIR certifică faptul că nicio parte a remunerației analiștilor nu a fost, nu este și nu va fi, direct sau indirect, legată de recomandarea sau opiniile specifice exprimate de analist în raport.

Informații suplimentare despre valorile mobiliare menționate în acest raport sunt disponibile la cerere. Acest raport se bazează pe date obținute din surse pe care le considerăm fiabile, dar nu este garantată acuratețea acestuia și nu își propune să fie complet. Orice opinii exprimate aici pot fi modificate.

ZIR nu este un consultant în investiții, iar raportul nu trebuie interpretat ca o consultanță concepută pentru a satisface nevoile specifice de investiții ale vreunui investitor. Înainte de a lua orice decizie de investiție, vă recomandăm să consultați brokerul, consultantul în investiții sau alt profesionist fiscal sau financiar competent pentru a determina adecvarea oricărei investiții. Acest raport și altele similare sunt publicate periodic și nu ca răspuns la activitatea episodică a pieței sau la evenimente care afectează industria valorilor mobiliare.

Acest raport nu trebuie interpretat ca o ofertă sau o solicitare a unei oferte de cumpărare sau vânzare a valorilor mobiliare menționate aici. ZIR sau directorii, angajații sau clienții săi pot deține o poziție lungă sau scurtă în valorile mobiliare menționate și pot cumpăra sau vinde valorile mobiliare din când în când. ZIR nu este un broker-dealer. ZIR poate încheia acorduri de tip „arms level” cu brokeri-dealer pentru a furniza aceste cercetări clienților lor. Zacks și personalul său nu sunt implicați în activități bancare de investiții pentru emitentul de acțiuni menționat în acest raport.

ZIR utilizează următorul sistem de rating pentru valorile mobiliare pe care le acoperă. **Performanță superioară** - ZIR se așteaptă ca societatea în cauză să depășească performanța piețelor de acțiuni din SUA în general în următoarele șase până la douăsprezece luni. **Neutră** - ZIR se așteaptă ca societatea să aibă performanțe în conformitate cu piețele de acțiuni din SUA în general în următoarele șase până la douăsprezece luni. **Performanță inferioară** - ZIR se așteaptă ca societatea să aibă performanțe inferioare piețelor de acțiuni din SUA în general în următoarele șase până la douăsprezece luni.

Nicio parte a acestui raport nu poate fi retipărită, republicată sau transmisă electronic fără autorizația prealabilă scrisă a ZIR.
