Summary

Energy Fuels is seeing improving uranium economics as throughput rises and unit costs decline, enhancing operating leverage. A solid contract base underpins volumes, with market-linked pricing preserving upside, while inventory supports near-term deliveries and enables opportunistic sales. Its rare earths strategy is progressing well backed by strong liquidity. However, rare earths monetization remains dependent on permitting, integration, and phased expansions. Profitability is still sensitive to commodity prices and sales mix, while mill sequencing, workforce ramp-up and campaign switching add operational complexity. Revenue timing may also lag if inventory builds are prioritized. While upward earnings revisions support the growth narrative, a mixed earnings surprise history and sensitivity to estimate changes suggest potential volatility.

Overview

Headquartered in Lakewood, CO, Energy Fuels produces uranium, vanadium and rare earth element products, and explores and develops heavy mineral sands (HMS) projects.

Energy Fuels' U.S. portfolio includes the Pinyon Plain, La Sal Complex, Roca Honda, Bulfrog, Nichols Ranch ISR, Sheep Mountain projects, and the White Mesa Mill near Blanding, UT. The mill is licensed to process up to 2,000 tons of mineralized material per day and the only licensed and operating uranium mill in the United States. The mill processes ore from Energy Fuels' conventional uranium mines on the Colorado Plateau and can recycle uranium-bearing "alternate feed" materials. It has also been modified to produce separated rare earth products. The company is evaluating the recovery of radionuclides from its existing process streams for use in emerging cancer treatments.

Internationally, the company owns the Bahia Heavy Mineral Sands (HMS) project in Brazil, Vara Mada HMS/monazite project in Madagascar (previously known as Toliara) and the Kwale project in Kenya (now in reclamation). The company, in June 2024, entered into an agreement with Astron Corp. and formed the Donald Project joint venture in Australia. As of Dec. 31, 2025, the company owns 9.48% of the Donald Project JV.

The company reports under three segments -

The uranium segment is engaged in conventional and in situ recovery activities, recycling of uranium-bearing materials and sales of uranium. The segment also produces vanadium pentoxide, as market conditions warrant. Customers for uranium include nuclear utilities and intermediaries in the United States and internationally. The uranium segment accounted for 76% of the company's total revenues.

The rare earth elements segment is engaged in efforts at the mill to produce both "light" and "heavy" separated REE oxides.

The heavy mineral sands segment comprises exploration, development and recovery of HMS products, including ilmenite, rutile, zircon and associated monazite, from the Vara Mada Project, Bahia Project and through the Donald Project JV. The HMS segment also includes the Kwale Project. The segment generated 24% of the company's total revenues in 2025.

Reasons To Buy:

- ▲ **Strategic asset base anchored by a unique U.S. processing hub:** Energy Fuels holds a diversified portfolio of conventional uranium, uranium/vanadium and REE/HMS assets across operating, development, exploration and permitted standby stages, positioning it as a key player in critical minerals. The White Mesa Mill stands out as the only licensed and operating uranium mill in the United States and the only facility capable of producing separated rare earth elements, making it central to the company's vision of building a domestic critical minerals hub. As uranium gains prominence as a carbon-free baseload energy source, further reinforced by its inclusion in the 2025 U.S. Geological Survey Critical Minerals List, the company is ramping up production. Near-term growth is supported by standby projects like Nichols Ranch ISR and Whirlwind, which could collectively add up to 500,000 pounds of annual uranium output within six–12 months of a “go” decision. Large-scale projects including Roca Honda, Sheep Mountain, and Henry Mountains–Bullfrog hold nearly 70 million pounds of uranium resources, with the potential to deliver up to 6 million pounds of annual production, underpinning significant future supply growth.
- Energy Fuels is poised well to grow on its efforts to increase uranium and rare earths production. Also, contracts, low-cost expansion and solid liquidity will drive earnings and long-term growth.
- ▲ **Advancing an integrated U.S. rare earths platform:** The company's rare earths strategy is progressing on multiple fronts. Phase 1 enhancements are expected to enable commercial production of both light and heavy rare earth oxides by 2027, and initial terbium oxide output targeted for March 2026. In September 2025, the company's high-purity NdPr oxide produced from US-sourced monazite concentrates was successfully manufactured into commercial-scale rare earth permanent magnets (REPMs) by South Korea's largest manufacturer of EV drive unit motor cores. The company has also successfully produced separated Dy oxide at 99.9% purity, exceeding commercial specifications. Energy Fuels is planning a Phase 2 expansion at White Mesa, scaling NdPr oxide capacity from the current 1,049 tons per year to around 6,294 tons. A Donald JV final investment decision is expected soon. The feasibility study for the Vera Mada project highlights strong project economics, world-class reserves of rare earths, titanium and zircon, and an initial mine life of 38 years with significant expansion potential. With an estimated capital cost of \$410 million for the Phase 2 and all-in production costs of \$29.39/kg NdPr equivalent from the Vera Mada project, the company expects its REE operations to rank among the lowest-cost producers globally. Meanwhile, downstream integration is poised to expand with the proposed acquisition of Australian Strategic Materials (“ASM”), which is targeted to close by June 2026. ASM's Korean Metals Plant (“KMP”) is one of the few facilities outside of China currently producing REE metals and alloys.
- ▲ **Strong contract base with price leverage and inventory optionality:** The company plans to mine 2–2.5 million pounds of uranium in 2026, with more than 2 million pounds expected from Pinyon Plain. Processing volumes are projected at 1.5–2.5 million pounds, while uranium sales are estimated at 1.5–2 million pounds through a mix of existing contracts and spot market transactions. As of year-end 2025, Energy Fuels held 810,000 pounds of finished uranium and a total of 2.18 million pounds of finished and contained inventory. This provides a buffer for near-term contracted deliveries of 620,000–880,000 pounds in 2026. The company added two new long-term contracts with U.S. nuclear utilities in the fourth quarter of 2025, bringing its total to six. These agreements cover deliveries from 2026 to 2032, with 3.21 million pounds of committed base sales and potential total deliveries ranging from 3.71 million to 5.29 million pounds, depending on customer options. Existing inventories, purchases and new production will be sufficient to meet contract requirements through 2026 and over the life of the supply contracts. The company also plans to make discretionary spot sales in 2026 and beyond, to capitalize on higher uranium prices.
- ▲ **Margin expansion driven by scale and efficiency:** Energy Fuels heads into 2026 with strong operating leverage. Its uranium mill achieved a steady throughput of roughly 250,000 pounds per month in Q4 2025, with output peaking at 350,000 pounds in December. Unit economics are improving as finished inventory costs fell to \$43 per pound at year-end 2025 and are projected to fall into the low \$30 range during 2026. At Pinyon Plain, cash costs are currently between \$23 and \$30 per pound, with higher-grade ore expected to further reduce costs as processing ramps up. With most contracts tied to market pricing and management guiding for gross margins above 50% in 2026, rising volumes and favorable pricing should significantly boost earnings momentum. This outlook is already reflected in upward revisions to 2026 earnings estimates.
- ▲ **Robust balance sheet supports long-term growth strategy:** Energy Fuels' financial position underpins its multi-year expansion plans across uranium and rare earths. Working capital was approximately \$927 million at year-end 2025, including about \$862 million of cash and marketable securities and no debt. The \$700 million 0.75% convertible notes due Nov. 1, 2031, closed in the fourth quarter of 2025. Approximately \$621 million of net proceeds are expected to be used for funding development expenditures, including project financing, required for the company's planned Phase 2 Circuit, funding development and earn-in expenditures, including project financing, required for the Donald Project, as well as general corporate needs, ongoing operational needs and working capital requirements. This liquidity profile and financing visibility reduce execution risk across 2026-2029, enabling Energy Fuels to pursue both uranium margin expansion and the rare earths growth strategy.

Reasons To Sell:

- ▼ **Permitting and execution risks could delay REE upside:** Key rare earths milestones remain dependent on approvals and integration. Phase 2 permits are targeted for 2027, with commissioning not until late 2028 or early 2029, pushing material cash flow further out. Vara Mada progress was delayed by about a quarter amid a government transition. Also, the ASM transaction requires multiple approvals before the targeted June 2026 close. Coordinating KMP's staged furnace expansions, adding heavy REE metals capability and aligning feed timing from Donald and Vara Mada with White Mesa upgrades add complexity. Any delay or holdups across any of these steps would push out volumes and defer expected diversification benefits beyond the 2026-2027 window, limiting contribution to near-term results.
- ▼ **Margins remain highly sensitive to pricing and sales mix:** The projected 2026 gross margin above 50% for 2026 assumes uranium prices continue strengthening and inventory costs decline into the low \$30s. First quarter 2026 deliveries include lower-priced legacy 2022 contracts. Management may build inventory rather than sell if markets weaken. Management also indicated they may opportunistically buy spot pounds to optimize inventory if prices soften, which can shift near-term revenue timing. The company's uneven EPS surprise history underscores this sensitivity.
- ▼ **Operational complexity may limit efficiency gains:** White Mesa cannot process uranium and rare earths simultaneously, and switching between campaigns reduces efficiency. Management intends to extend the uranium run that began in the fourth quarter of 2026 through at least the second quarter of 2026, which may defer some REE activities and associated learnings. Optimizing run-time while training and scaling a skilled conventional mining workforce at Pinyon and La Sal introduces operational complexity. Bottlenecks in mining, logistics or scheduling could affect throughput, costs and delivery timelines, limiting near-term efficiency gains.
- ▼ **Flexible sales strategy creates revenue timing risk:** While inventory and discretionary sales provide pricing flexibility, they can also delay revenue recognition. The first quarter of 2026 realizations are expected to be lower due to a legacy contract and newer contracts back-half weighted. Finished goods at year-end 2025 can cover 2026 term deliveries of roughly 620-880 thousand pounds, while additional processed pounds may be allocated to inventory, spot or new term contracts. This flexibility supports value maximization, but can delay revenue recognition if inventory build is prioritized. In short, even as costs decline and volumes rise in 2026, reported revenue may be lower if the company opts to defer sales into later periods.

Energy Fuels might face permitting delays and operational constraints. Flexible sales and inventory strategies may shift revenue timing and delay near-term earnings realization.

Last Earnings Report

Energy Fuels Reports a Q4 Loss, Misses Estimates

Energy Fuels reported a loss of eight cents per share in the fourth quarter of 2025, missing the Zacks Consensus Estimate of a loss of seven cents. The company reported a loss of 19 cents in the year-ago quarter. The company reported revenues of \$27 million, flat year over year, reflecting lower HMS revenues, and in line with the Zacks Consensus Estimate.

Energy Fuels' Revenues Decline Y/Y in 2025

Fiscal 2025 revenues were at \$65.9 million, down 16% year over year. This was primarily due to a 60% decline in HMS sales in 2025 as a result of fewer product sales following the completion of mining activities at Kwale and reclamation advanced.

Uranium revenues were \$50.1 million, up 31% year over year. Uranium sales were 650,000 pounds at an average realized price of \$74.21 per pound. This included 350,000 pounds sold on the spot market at \$76.90 and 300,000 pounds under long-term contracts at \$71.06.

In 2024, Energy Fuels sold 450,000 pounds of uranium at a weighted average price of \$84.23 per pound. The gains from the increase in sales volume in 2025 were somewhat offset by a decline in average realized price.

The company reported a net loss per share of 38 cents per share in 2025 compared with a loss of 28 cents per share in 2024.

Total cost of sales was down 6.7% year over year to \$52 million in 2025. This was primarily due to lower HMS costs applicable to revenues during 2025 associated with the lower volumes sold due to the lower grade mined at the end of the Kwale mine life, partially offset by higher costs applicable to uranium, mostly due to higher volumes and cost per pound sold between periods.

The company reported a full-year 2025 gross margin of around 31% and noted COGS per pound decreased from \$53 to \$43 during 2025. Further declines are expected as higher-grade ore is processed in 2026.

Cash Flow & Balance Sheet Updates

As of Dec. 31, 2025, the company had \$927.4 million of working capital, including \$64.7 million of cash and cash equivalents, \$797.1 million of marketable securities (short-term, interest-bearing securities and uranium equities), \$18.0 million of trade and other receivables, and \$73.5 million of inventory, which puts the Company in a strong position to continue to advance its projects.

Operating cash flow for 2025 was a use of \$89.5 million, reflecting ramp-related spending, the HMS wind-down, and higher corporate and project activity as the company scaled its uranium and rare earth platforms.

Energy Fuels' Uranium Output Beats Targets in 2025

Energy Fuels mined material containing roughly 1.72 million pounds of uranium from the Pinyon Plain, La Sal and Pandora mines, exceeding the guidance range of 0.875-1.44 million pounds.

The Pinyon Plain mine alone contributed approximately 1.53 million pounds of uranium with an average grade of approximately 1.62%, making it one of the highest-grade uranium mines in U.S. history.

Energy Fuels processed and produced 1.015 million pounds of finished uranium in 2025, higher than the guidance of 0.7-1 million pounds.

UUUU's Outlook for 2026

The company expects to mine 2-2.5 million pounds of uranium in 2026, of which Pinyon is expected to contribute more than 2 million pounds. UUUU expects to process between 1.5 million and 2.5 million pounds of finished uranium and sell 1.5-2 million pounds of uranium under existing contracts and spot market sales.

Processing of low-cost Pinyon Plain ore, which began in late 2025, is expected to continue through the second quarter of 2026.

Energy Fuels expects gross margins in 2026 to increase to 50% and above, as the finished inventory weighted average cost continues to decrease from \$43 per pound to the low \$30 levels and uranium prices strengthen.

Recent News

UUUU's Proposed Acquisition of Australian Strategic Materials

Energy Fuels on **Jan. 20, 2026**, announced a proposed acquisition of Australian Strategic Materials (ASM). Management said the transaction, if completed, would expand the company's reach into rare earth metals and alloys. It would also bring another potential material source of rare earth feedstock from ASM's Dubbo project in New South Wales, Australia. The company characterized the plan as part of a broader push to invest "downstream" in the rare earth value chain. The proposal remains subject to completion, but it signals intent to add capabilities beyond concentrates into higher-value REE products.

Updated Feasibility Study Validates Economics of Vara Mada REE/HMS Project

Energy Fuels, on **Jan. 8**, released an updated feasibility study for its 100% owned Vara Mada project in Madagascar. The study confirms world-class scale and economics, citing a \$1.8 billion NPV. The project targets rare earth elements and heavy mineral sands. The update matters because it sharpens project definition and supports planning for development and funding options. It also expands Energy Fuels' growth runway outside the United States, consistent with its critical materials strategy.

U.S.-Produced Heavy Rare Earth Oxide Qualified for Permanent Magnets

Energy Fuels, on **Dec. 19, 2025**, said its U.S.-produced heavy rare earth oxide was successfully qualified for use in permanent magnets. This qualification is an important step that demonstrates the material's suitability for magnet applications and precedes commercial supply. The milestone validates the company's rare earth processing capabilities and positions it to pursue magnet-related end markets. For investors, it de-risks the rare earth growth plan and may support future customer engagement and contracting, depending on demand and pricing.

Valuation

Energy Fuels shares have risen 27.5% over the past three months and 342.3% over the past year. The Zacks sub-industry and the Zacks Basic Materials sector are up 24.5% and 12% over the past three months, and 63.6% and 36.8% over the past year, respectively.

The S&P 500 is down 0.8% over the past three months but up 20.2% over the past year.

The stock trades at 27.99x forward 12-month sales per share, versus 4.46x for the Zacks sub-industry, 1.91x for the Zacks sector, and 4.97x for the S&P 500. Over the past five years, the multiple has ranged from 4.92x to 629.2x, with a five-year median of 20.6x.

Our Neutral rating indicates an expectation for performance in line with the market. Our \$21 price target reflects 30.42X forward 12-month sales.

Zacks Stock Rating System

We offer two rating systems that take into account investors' holding horizons: Zacks Rank and Zacks Recommendation. Each provides valuable insights into the future profitability of the stock and can be used separately or in combination with each other depending on your investment style.

Zacks Recommendation

The Zacks Recommendation aims to predict performance over the next 6 to 12 months. The foundation for the quantitatively determined Zacks Recommendation is trends in the company's estimate revisions and earnings outlook. The Zacks Recommendation is broken down into 3 Levels; Outperform, Neutral and Underperform. Unlike many Wall Street firms, we have an excellent balance between the number of Outperform and Neutral recommendations. Our team of 70 analysts are fully versed in the benefits of earnings estimate revisions and how that is harnessed through the Zacks quantitative rating system. But we have given our analysts the ability to override the Zacks Recommendation for the 1200 stocks that they follow. The reason for the analyst over-rides is that there are often factors such as valuation, industry conditions and management effectiveness that a trained investment professional can spot better than a quantitative model.

Zacks Rank

The Zacks Rank is our short-term rating system that is most effective over the one- to three-month holding horizon. The underlying driver for the quantitatively-determined Zacks Rank is the same as the Zacks Recommendation, and reflects trends in earnings estimate revisions.

Zacks Style Scores

The Zacks Style Score is as a complementary indicator to the Zacks rating system, giving investors a way to focus on the highest rated stocks that best fit their own stock picking preferences.

Academic research has proven that stocks with the best Value, Growth and Momentum characteristics outperform the market. The Zacks Style Scores rate stocks on each of these individual styles and assigns a rating of A, B, C, D and F. We also produce the VGM Score (V for Value, G for Growth and M for Momentum), which combines the weighted average of the individual Style Scores into one score. This is perfectly suited for those who want their stocks to have the best scores across the board.

Value Score	F
Growth Score	F
Momentum Score	A
VGM Score	F

As an investor, you want to buy stocks with the highest probability of success. That means buying stocks with a Zacks Recommendation of Outperform, which also has a Style Score of an A or a B.

AI learning models, such as ChatGPT, are trained on a diverse range of historical data and do not have real-time awareness or access to current events. AI learning models are subject to "drift" or "decay," which can occur when the data the models were trained on differs from the data that the models encounter once deployed. While efforts have been made to ensure the quality and reliability of the content herein, and this report is based on data obtained from sources ZIR believes to be reliable, there may be limitations, inaccuracies, biases, or new developments that could impact the accuracy of this report. Therefore, this report is not guaranteed to be accurate and does not purport to be complete. Any opinions expressed herein are subject to change. Additional information on the securities mentioned in this report is available upon request.

ZIR is not an investment advisor and the report should not be construed as advice designed to meet the particular investment needs of any investor. Prior to making any investment decision, you are advised to consult with your broker, investment advisor, or other appropriate tax or financial professional to determine the suitability of any investment. This report and others like it are published regularly and not in response to episodic market activity or events affecting the securities industry.

This report is not to be construed as an offer or the solicitation of an offer to buy or sell the securities herein mentioned. ZIR or its officers, employees or customers may have a position long or short in the securities mentioned and buy or sell the securities from time to time. ZIR is not a broker-dealer. ZIR may enter into arms-length agreements with broker-dealers to provide this research to their clients. Zacks and its staff are not involved in investment banking activities for the stock issuer covered in this report.

ZIR uses the following rating system for the securities it covers. **Outperform-** ZIR expects that the subject company will outperform the broader U.S. equities markets over the next six to twelve months. **Neutral-** ZIR expects that the company will perform in line with the broader U.S. equities markets over the next six to twelve months. **Underperform-** ZIR expects the company will underperform the broader U.S. equities markets over the next six to twelve months.
