Summary

ExxonMobil's high-value assets in the Permian Basin and Guyana drive robust production growth, doubling upstream earnings since 2019. The company continues to achieve record production in both key oil-producing regions. With a lower exposure to debt capital, XOM supports steady cash flows, dividends, buybacks and investments in high-return projects. Expansion in low-carbon tech, including Baytown's hydrogen facility, positions it for future growth. ExxonMobil reported strong fourth-quarter earnings driven by higher oil equivalent production volumes. However, crude prices are expected to remain under pressure this year, affecting upstream earnings. Furthermore, its newer businesses, including lithium and low-carbon ventures, are in very early stages of development with considerable uncertainty around meaningful earnings contributions.

Overview

Over the past decade, ExxonMobil has undergone a significant transformation, reshaping its business to adapt to evolving energy demands, financial discipline and environmental considerations. Traditionally reliant on oil and gas, the company has streamlined operations and focused capital on high-return, low-cost projects. ExxonMobil has achieved nearly \$13 billion in structural cost savings since 2019 and divested \$24 billion in non-core assets, strategically enhancing its earnings power and improving cost efficiency.

In upstream operations, ExxonMobil is emphasizing volume growth from the Permian Basin and offshore Guyana. The acquisition of Pioneer Natural Resources has expanded its Permian footprint, enabling efficient, lower-cost drilling and increased profitability. In Guyana, ExxonMobil remains the lead operator with a 45% stake and plans to more than double its production by 2030. These assets are expected to deliver significant returns, but also increase risk, especially in regions with political or regulatory uncertainty.

The company is simultaneously building its presence in lower-carbon energy. ExxonMobil is constructing a major low-carbon hydrogen and ammonia plant in Baytown, TX, targeting emissions capture of 98%. It has also expanded into plastic recycling and is scaling up advanced facilities to process up to 400 million pounds of plastic annually. These initiatives are part of its broader strategy to develop businesses insulated from commodity price swings and support long-term sustainability.

Financially, ExxonMobil maintains a strong balance sheet and continues to return capital to shareholders through dividends and buybacks, bolstered by resilient cash flows even amid price volatility. While near-term earnings are being hurt by lower oil and gas prices, the company's long-term strategy, focused on disciplined investment, operational excellence and diversification, marks a significant evolution from its past dependency on upstream profits, which accounted for more than 70% of total earnings in 2024.

Reasons To Buy:

- ▲ ExxonMobil is making major strides in two of its key oil regions—the Permian Basin in the United States and offshore Guyana. In the Permian, its merger with Pioneer Natural Resources has added valuable land and resources, allowing the company to drill more efficiently and at lower costs. Furthermore, in the Permian, the company has recently begun deploying a new lightweight proppant that penetrates deeper into fracs and improves recovery rates significantly. The company intends to deploy the new proppant to nearly 50% of new wells by the end of 2026. In the fourth quarter, XOM achieved record production levels of 1.8 million oil-equivalent barrels per day and expects to surpass 2.5 million oil-equivalent barrels per day beyond 2030. Meanwhile, in Guyana, ExxonMobil has turned a 2015 oil discovery into one of the fastest-growing projects in the world, reaching record gross production of 875,000 barrels per day in the quarter. Together, these efforts are boosting ExxonMobil's production and profits while creating jobs and economic growth in the regions where it operates. It is to be noted that although Chevron's recent acquisition of Hess, which gives it a 30% position in the Guyana Stabroek Block, is a bit of a setback for ExxonMobil—since it tried to block the deal—it's not a major loss. In fact, ExxonMobil is still the main operator of the Guyana oilfield and owns the largest share with a 45% stake.
- ▲ The integrated energy major is making a significant move into cleaner energy by constructing what could be the world's largest low-carbon hydrogen and ammonia plant in Baytown, TX. This facility will produce large amounts of cleaner fuel while capturing 98% of the carbon emissions. A major deal with Japan's Marubeni demonstrates strong demand—ExxonMobil will send 250,000 tons of low-carbon ammonia each year to help power plants in Japan reduce pollution. This project not only brings the company new business but also supports industries like steel and shipping in lowering their carbon footprint, positioning the energy giant as a leader in the future of clean energy.
- ▲ ExxonMobil is taking big steps to tackle plastic waste by building advanced recycling plants that turn old plastic into new raw materials. At its Baytown site, it has already recycled more than 100 million pounds of plastic and plans to recycle five times that amount each year soon. Unlike regular recycling, this method can handle many types of plastic and convert about 90% of it for reuse. ExxonMobil is also working with local communities to collect plastic waste and expand its efforts around the world. This shows that the company is serious about protecting the environment while still making a profit.
- ▲ Compared to other players in the same industry, XOM has much lower exposure to debt capital. Therefore, the company is capable of withstanding a tough business environment by relying on its strong balance sheet. The company is also highly committed to returning capital to shareholders through both dividend payments and share buybacks. Impressively, ExxonMobil has raised its dividend every year for the past 43 years. Furthermore, the company repurchase \$20 billion worth of shares in 2025, retiring almost one-third of the shares issued during the Pioneer Energy transaction.

ExxonMobil combines strong upstream growth, clean energy expansion, and solid returns backed by financial strength.

Reasons To Sell:

- ▼ With exploration and production activities contributing mostly to the integrated energy giant's bottom line, the company's overall operations are highly vulnerable to the volatility in crude oil and natural gas prices. For investors who prefer stable and predictable returns, this heavy reliance on volatile commodity prices could make the stock a volatile pick. ExxonMobil's fourth-quarter upstream earnings fell significantly compared with the prior-year quarter, mainly due to weaker crude price realizations. Crude prices are expected to remain under pressure this year, which may hamper XOM's upstream earnings.
- ▼ ExxonMobil mentions that its newer businesses, including low-carbon solutions, lithium and carbon capture schemes, are still in the very early stages of development. These ventures come with considerable uncertainty around when they will begin to generate meaningful earnings contributions for the company.
- ▼ ExxonMobil has expressed concerns regarding the construction deadline of the Baytown low-carbon hydrogen facility, which has been reduced from 2033 to 2028. While the company aims to develop this as the largest low-carbon hydrogen project, XOM mentioned that this project is a complicated one that requires government support as well as a sustainable market for the product. The project's progress is closely related to U.S. tax credits (45V for hydrogen). If the company is not able to carve out a clear path for a sustainable, market-driven business, it may not proceed with the project any further.
- ▼ ExxonMobil continues to face challenges in its Chemicals divisions mainly due to a weaker margin environment. In the fourth quarter, the unit recorded a loss of \$11 million (excluding identified items), compared with a profit of \$215 million recorded in the prior-year quarter. The company notes that the challenging margin environment, despite robust demand, is mainly due to the supply side of the equation and immediate improvement from the current situation remains quite uncertain.

ExxonMobil faces earnings pressure from weak commodity prices, Guyana risks, and global trade uncertainties.

Last Earnings Report

ExxonMobil's Q4 Earnings Top Estimates, Revenues Decline Y/Y

ExxonMobil reported fourth-quarter 2025 earnings per share of \$1.71 (excluding identified items), which beat the Zacks Consensus Estimate of \$1.68. The bottom line improved from the year-ago quarter's level of \$1.67.

Total quarterly revenues of \$82.3 billion lagged the Zacks Consensus Estimate of \$83.2 billion. The top line also declined from the year-ago figure of \$83.4 billion.

The strong quarterly earnings can be attributed to higher oil equivalent production volumes and higher industry refining margins. The positives were partially offset by lower crude oil and natural gas price realizations.

Operational Performance

Upstream

The segment reported quarterly earnings (excluding identified items) of \$4.41 billion, down from \$6.28 billion in the year-ago quarter. The decline was primarily due to lower crude price realizations, decreased base volumes from divestments and higher depreciation expenses.

Operations in the United States recorded a profit of \$1.22 billion, lower than \$1.62 billion in the December-end quarter of 2024. The company reported a profit of \$3.19 billion from non-U.S. operations compared with \$4.67 billion in the year-ago quarter.

Production: ExxonMobil's production averaged 4,988 thousand barrels of oil equivalent per day (MBoe/d), higher than 4,602 MBoe/d a year ago. The growth in production levels was driven by its advantaged assets in the Permian and Guyana.

Liquids production increased to 3,531 thousand barrels per day (MBbls/d) from 3,213 MBbls/d in the prior-year quarter. The increase can be attributed to higher production from the United States and Canada/Other Americas.

Natural gas production totaled 8,743 million cubic feet per day (Mmcf/d), higher than 8,331 Mmcf/d a year ago. Higher production in the United States and Australia/Oceania contributed to the increase.

Price Realization: In the United States, ExxonMobil recorded crude price realization of \$58.57 per barrel, down from the year-ago figure of \$67.58. Crude price realization for non-U.S. operations decreased to \$57.46 per barrel from \$67.58 in the year-ago quarter.

Natural gas price in the United States was \$1.75 per thousand cubic feet (Mcf), lower than the year-ago level of \$2.09. Additionally, in the non-U.S. section, the metric declined to \$9.60 per Mcf from \$10.77.

Energy Products

The segment recorded a profit (excluding identified items) of \$2,907 million, up from \$323 million a year ago. The increase was driven by higher industry refining margins from favorable gasoline and diesel crack spreads, higher volumes due to record North American refining throughput and the growth of advantaged projects. However, these gains were partly offset by higher seasonal expenses.

Chemical Products

This unit of ExxonMobil recorded a loss of \$11 million (excluding identified items), compared to a profit of \$215 million in the year-ago quarter. The segment was affected by weaker margins and higher seasonal spending.

Specialty Products

This unit recorded a profit of \$682 million (excluding identified items), down from \$759 million in the year-ago quarter. The segment was impacted by higher seasonal spending, partially offset by higher margins due to reduced feed costs.

Financials

ExxonMobil generated a cash flow of \$13.7 billion from operations and asset divestments. The company generated free cash flow of \$5.6 billion. Its capital and exploration spending amounted to \$8.1 billion.

Total cash and cash equivalents were \$10.7 billion, and long-term debt totaled \$34.2 billion.

Guidance

For 2026, the company's cash capital expenditures are projected to be between \$27 billion and \$29 billion. ExxonMobil plans to repurchase shares worth \$20 billion in 2026, under reasonable market conditions.

The company expects Permian Basin production to average 1.8 million barrels of oil equivalent per day (Moebd), contributing to total upstream production of 4.9 Moebd in 2026.

FY Quarter Ending **12/31/2025**

Earnings Reporting Date	Jan 30, 2026
Sales Surprise	-1.05%
EPS Surprise	1.79%
Quarterly EPS	1.71
Annual EPS (TTM)	6.99

Valuation

ExxonMobil shares are up 37.2% in the past six months and 39.2% over the trailing 12-month period. Stocks in the Zacks sub-industry are up 31.1% while the Zacks Oil-Energy sector is up 26.8% in the past six months, respectively. Over the past year, the Zacks sub-industry is up 32.7% but the sector is up 36.2%.

The S&P 500 index is up 6.4% in the past six months and 21.5% in the past year.

The stock is currently trading at 1.87X forward 12-month sales, which compares to 1.47X for the Zacks sub-industry, 1.54X for the Zacks sector, and 5.08X for the S&P 500 index.

Over the past five years, the stock has traded as high as 1.95X and as low as 0.81X, with a 5-year median of 1.20X. Our Neutral recommendation indicates that the stock will perform in line with the market. Our \$159.00 price target reflects 1.98X F12M sales.

Zacks Stock Rating System

We offer two rating systems that take into account investors' holding horizons: Zacks Rank and Zacks Recommendation. Each provides valuable insights into the future profitability of the stock and can be used separately or in combination with each other depending on your investment style.

Zacks Recommendation

The Zacks Recommendation aims to predict performance over the next 6 to 12 months. The foundation for the quantitatively determined Zacks Recommendation is trends in the company's estimate revisions and earnings outlook. The Zacks Recommendation is broken down into 3 Levels; Outperform, Neutral and Underperform. Unlike many Wall Street firms, we have an excellent balance between the number of Outperform and Neutral recommendations. Our team of 70 analysts are fully versed in the benefits of earnings estimate revisions and how that is harnessed through the Zacks quantitative rating system. But we have given our analysts the ability to override the Zacks Recommendation for the 1200 stocks that they follow. The reason for the analyst over-rides is that there are often factors such as valuation, industry conditions and management effectiveness that a trained investment professional can spot better than a quantitative model.

Zacks Rank

The Zacks Rank is our short-term rating system that is most effective over the one- to three-month holding horizon. The underlying driver for the quantitatively-determined Zacks Rank is the same as the Zacks Recommendation, and reflects trends in earnings estimate revisions.

Zacks Style Scores

The Zacks Style Score is as a complementary indicator to the Zacks rating system, giving investors a way to focus on the highest rated stocks that best fit their own stock picking preferences.

Academic research has proven that stocks with the best Value, Growth and Momentum characteristics outperform the market. The Zacks Style Scores rate stocks on each of these individual styles and assigns a rating of A, B, C, D and F. We also produce the VGM Score (V for Value, G for Growth and M for Momentum), which combines the weighted average of the individual Style Scores into one score. This is perfectly suited for those who want their stocks to have the best scores across the board.

Value Score	B
Growth Score	D
Momentum Score	A
VGM Score	B

As an investor, you want to buy stocks with the highest probability of success. That means buying stocks with a Zacks Recommendation of Outperform, which also has a Style Score of an A or a B.
