

INI - Senior Embedded Software Engineer

KEY COMPETENCES

- Stakeholder alignment & cross-functional coordination
- ASPICE compliance & requirements traceability
- Agile/SCRUM methodology
- Functional & System Architecture (SysML, UML, MagicDraw, Cameo)
- ADAS development across the full V-cycle (autonomous parking, braking, body, lighting, powertrain)
- Functional Safety (ISO 26262, ASIL, HARA, FMEA/FMEDA)

SKILLS

- Risk Tracking & Dependency Management & Traceability
- ASPICE, HARA, FMEA/FMEDA
- Agile/SCRUM, Jira, Confluence, Git
- Full Automotive V-cycle (ADAS, Body,PWT,Chassis)
- CAN, Diagnostics, CAPL scripting, MATLAB/Simulink
- Automation(Excel(L4/5),Scripting,VBA)

LANGUAGES

- Romanian native
- English C1
- French B2
- German A2

PROFESSIONAL BACKGROUND

Automotive Software & Systems Engineer with 8+ years of experience driving **process optimization** and transformation across complex, multi-domain projects. Proven ability to align stakeholders and ensure clarity in environments with **numerous dependencies**. Strong expertise in **structured methodologies** (ASPICE, ISO 26262) and rigorous application of **Definition of Done (DoD) criteria** to maintain quality and compliance. Skilled in **data consistency, documentation, and cross-team coordination**, with a focus on creating transparent, reliable **workflows**. **Proficiency in Excel-based analysis, database structuring**, and automation through scripting and API-driven workflows. Experienced in Jira tracking and leveraging SQL for data integrity and reporting. AI and Data Enthusiast, actively exploring AI-assisted process automation and data-driven decision-making to enhance efficiency and scalability. Recognized for structured thinking, disciplined follow-up, and the ability to bring alignment and clarity to complex and/or technical ecosystems.

EDUCATION & CERTIFICATION

- MSc – Artificial Intelligence (AI Models & Methods) - ongoing
- BSc – Computer Science
- Capgemini L2 Industry Certification – Automotive

MAIN REFERENCES

Capgemini Engineering (2022 – Present)

- **SYS1 Functional Design Engineer (VW)** – Developed autonomous parking and trailer assist systems; translated use cases into SysML models and functional requirements aligned with OEM specifications.
- **Safety System Architect (Renault)** – Reviewed ASIL safety concepts per ISO 26262 standard, ensuring compliance at system and SWC level; defined verification strategy for ASIL infrastructure. Implemented automation solutions ranging from advanced Excel formulas to custom macros and interactive button-driven workflows, ensuring streamlined processes and documentation consistency.
- **System Integrator (Renault)** – Integrated and debugged HMI software using CAPL scripting in CANoe; verified DSP/DRP connections for final delivery.
- **System Architect (Renault)** – Performed dependency analysis of vehicle computer functions (Body, Chassis, HMI, Powertrain); created multi-layer architecture diagrams. Managed cross-functional dependency tracking with automation - Excel/Scripting/VBA. Facilitated alignment towards cross-functional teams to unlock feature integration delays.

Expleo (2021 – 2022) – Functional Design Engineer (Stellantis)

- Reviewed and updated software requirements for exterior lighting systems, ensuring documentation accuracy and full bi-directional tracability.
- Collaborated with PMs and technical leads to validate change requests and ensure that technical and schedule dependencies were reflected correctly in reporting.
- Maintained SysML/CATIA architectural diagrams to streamline communication and system-level compatibility.
- Supported decision-making by structuring complex technical inputs into clear, actionable engineering documentation.

ALTEN (2016 – 2021) – Software Architect / Fault Analyst / Team Lead

- Elevated Stellantis DAL project from ASPICE Level 1 to ASPICE Level 3 compliance by enhancing traceability between requirements, code, and tests, with Safety implications.
- Acted as Transformation Manager – implemented multidisciplinary collaboration towards merger of DAL+FAPS teams=> Improved KPIs (FTR) and increased productivity.
- Conducted CAN trace analysis (.blf/.asc) and resolved cross-domain issues in body, chassis, ADAS, and powertrain.
- Performed MIL/SIL closed-loop testing in MATLAB/Simulink, validating engine cluster interfaces and debugging anomalies.
- Mentored junior engineers on defect analysis and architecture methods; led interviews and training programs.
- SPOC for PI Planning;
- Represented the team on-site at PSA Vélizy, engaging directly with OM leadership and securing recognition for technical delivery and communication clarity.
