

ROBERT BUZABRICI-FILIPESCU

EXPECTED ROLE:

Senior Embedded Software Engineer

KEY COMPETENCES

- Embedded C SW development
- Stakeholder alignment & cross-functional coordination
- ASPICE compliance & requirements traceability
- Agile/SCRUM methodology
- Functional & System Architecture (UML, MagicDraw)
- Functional Safety (ISO 26262, ASIL)

SKILLS

- Languages & Tools: ANSI C, C++, CANoe, Trace32, Google Test, Git, Jira, Confluence, CAPL scripting
- Development Models: V-Cycle, Agile, Scrum
- Protocols & Standards: CAN, CCP, XCP, AUTOSAR, ISO 26262
- Hardware Expertise: Xilinx SDK, Zynq-7000 SoC, ARM Cortex-A9
- Expanding Knowledge: Python, C#, Rust

LANGUAGES

- Romanian native
- English C2
- German B1

PROFESSIONAL BACKGROUND

Senior Embedded Software Engineer with 13+ years of experience in automotive and space-grade systems. Specialized in instrument cluster development, CAN communication, and AUTOSAR-based platforms. Proven record of delivering high-performance embedded solutions for OEMs including Daimler, Ford, Renault, Volkswagen, Porsche, and Audi. Strong focus on reliability, real-time performance, and technical leadership.

KEY ACHIEVEMENTS

- Reduced debugging time by 25% through rigorous code reviews and adherence to coding standards.
- Improved code reliability by 25% via comprehensive unit and component testing strategies.
- Delivered 300+ commits ensuring consistent quality and timely releases.
- Built knowledge base of 50+ modules, cutting integration errors by 20% and boosting cross-team collaboration.
- Optimized embedded modules → 20% memory reduction and improved responsiveness for smoother OEM integration.
- Enhanced real-time performance with buffer management and interrupt-driven design on Zynq-7000 SoC (ARM Cortex-A9).
- Acted as Tech Lead, resolving critical roadblocks, mentoring new members, and ensuring project continuity with direct client engagement.

EDUCATION & CERTIFICATION

- Classic Autosar using Ve
- Classic&Adaptive AUTOSAR using EB Tressos
- Master in Communication Networks
- Capgemini L2 Automotive Industry Certification

MAIN REFERENCES

Senior Embedded Software Engineer / Tech Lead Replacement @ Capgemini Services Romania SRL (Capgemini Engineering)

(Apr 2022 – Nov 2025)

- Optimized embedded modules → 20% memory reduction, improved responsiveness, smoother OEM integration.
- Boosted collaboration → Cut issue resolution time by 30%.
- Enhanced quality → Refined CAPL tests, reducing post-release bugs by 30%; Google Test improved dependability by 25%.
- Delivered 300+ Git commits with 100% coding standards compliance → 25% less debugging time.
- Technical leadership → Acted as Tech Lead, resolving critical roadblocks, mentoring new members, and maintaining project continuity with direct client engagement.

Senior Embedded Software Engineer – Space Platforms @ ENEA Software Development Services SRL

(Apr 2021 – Apr 2022)

- Improved real-time performance → Reduced latency via buffer management & interrupt-driven design.
- Optimized constrained environments → Worked with Xilinx SDK / Zynq-7000 SoC (ARM Cortex-A9).
- Developed space-grade C/C++ modules → Reliability & fault tolerance focus.
- Engineered SpaceWire driver interface & state machine for RendezVous Sensor → Enabled real-time telecommand processing.
- Championed knowledge base of 30+ modules → 20% fewer integration errors, streamlined communication across 3 teams.

Senior Embedded Software Engineer – Automotive Platforms @ Visteon Electronics EOOD Sofia, BG – contractor from RINF.TECH

(Jun 2014 – May 2020)

- Led instrument cluster development for Daimler (C/C++) → Improved reliability & user experience.
- Validated display components with CANoe → Cut test cycle time by 20%. Delivered robust OEM features (Speedometer, Tachometer, Odometer, etc.).
- Implemented IPC & Franca IDL files → Enabled seamless communication between Application Layer & HMI. Ensured AUTOSAR RTE compliance across projects.

Embedded Software Engineer @ Continental Automotive Romania SRL

(Aug 2010 – May 2014)

- Implemented customer-specific C/C++ functionalities across Ford, Renault, VW, Porsche, Audi.
- Improved diagnostic reliability (DTC, freeze frames, failure reactions) across 5+ OEM platforms.
- Validated CAN channels & diagnostic instances → Enhanced error management.
- Reduced field failures via unit & integration testing, documented QA reports.
- Applied ISO26262 standards in Powertrain systems.
